INTERIOR DESIGN

YUKARI PROJECT

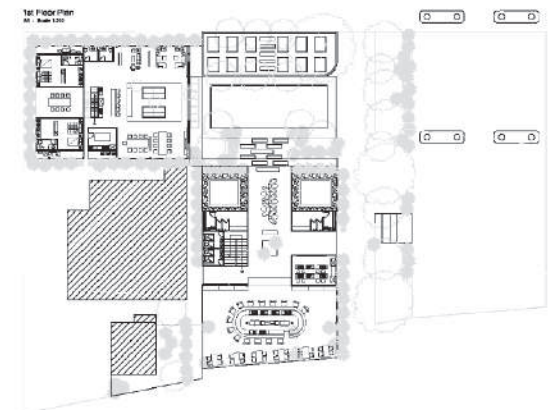

(almdhouse project)

"Friendship" that fosters camaraderie and creates new activities to alleviate loneliness focuses on community work for everyone to participate in activities together all the time.

This will lead to a design event where all functions will have space to work together in groups to alleviate loneliness further.

As for the design style, Thai Tropical will be chosen to match the environment.

ALTERMAFILM

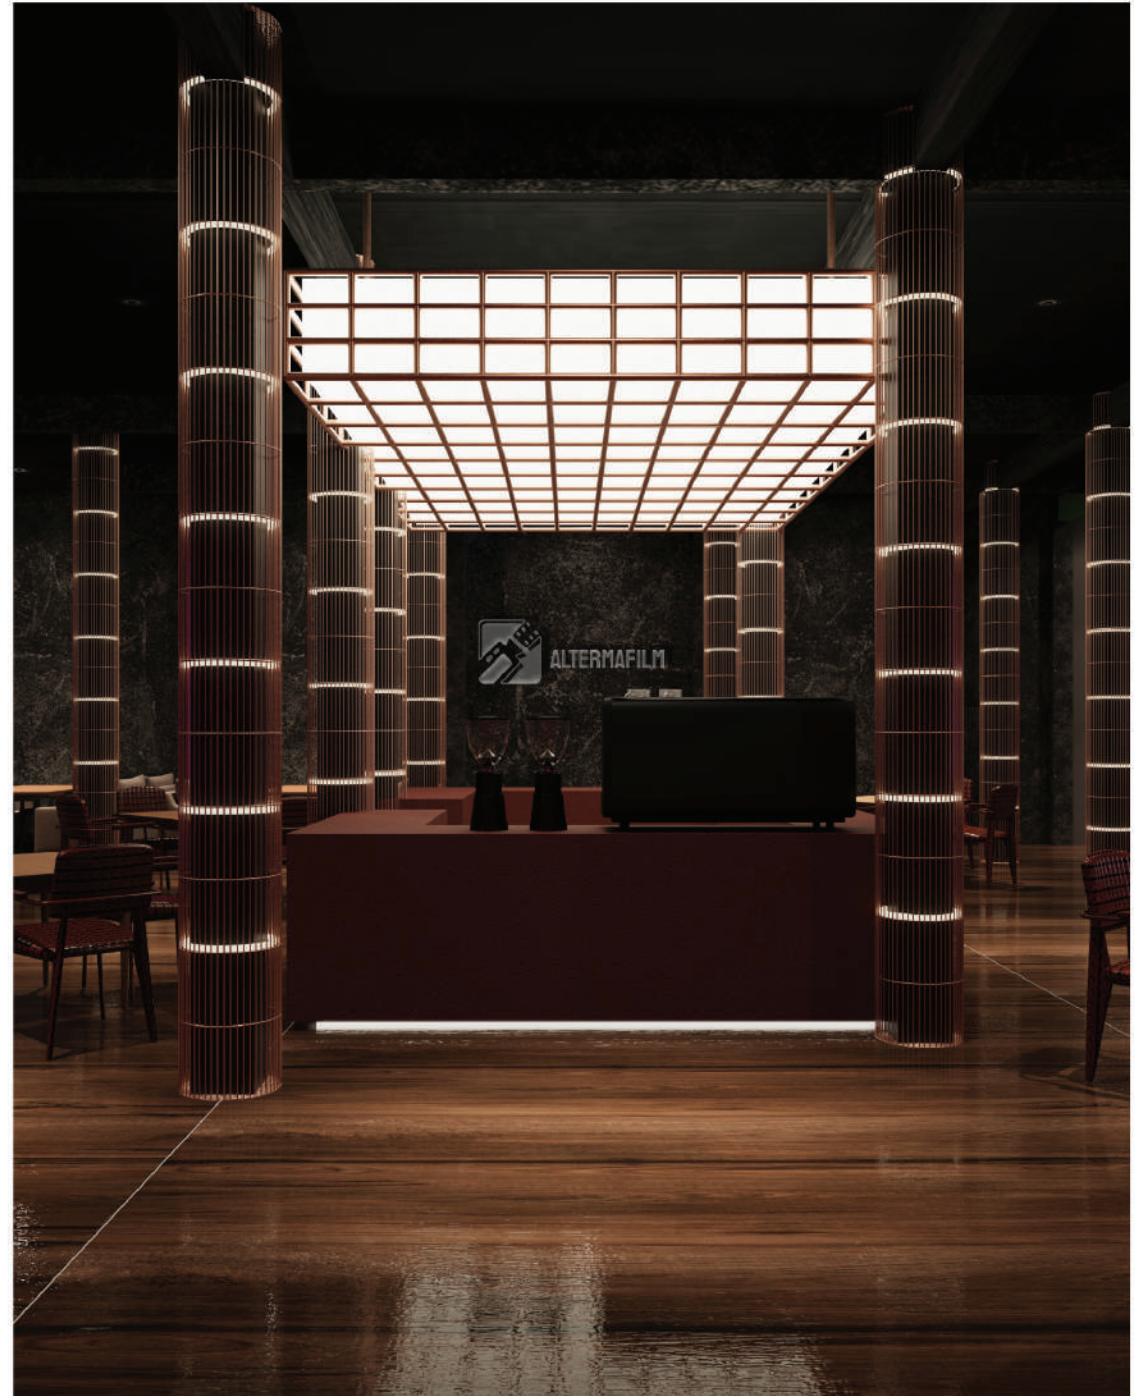

(mix-used project renovate old-hotel
hua lamphong)

"Film Noir is a style that is likened to black and white images, reflected on film cameras during the early era of camera invention.

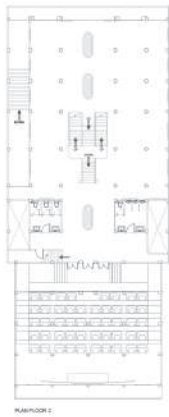

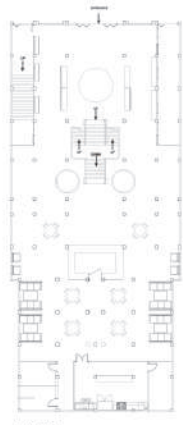

This led to the emergence of modernist and avant-garde design, emphasizing colors such as brown, white, and black, which were classic and blended with existing classic architecture.

In terms of design, film details have been brought up to discuss the frequency of film grains, which are related to the film's shutter design that emphasizes making the space appear wider and more spacious.

Lighting has also been incorporated to enhance the atmosphere, making it appear more classic."

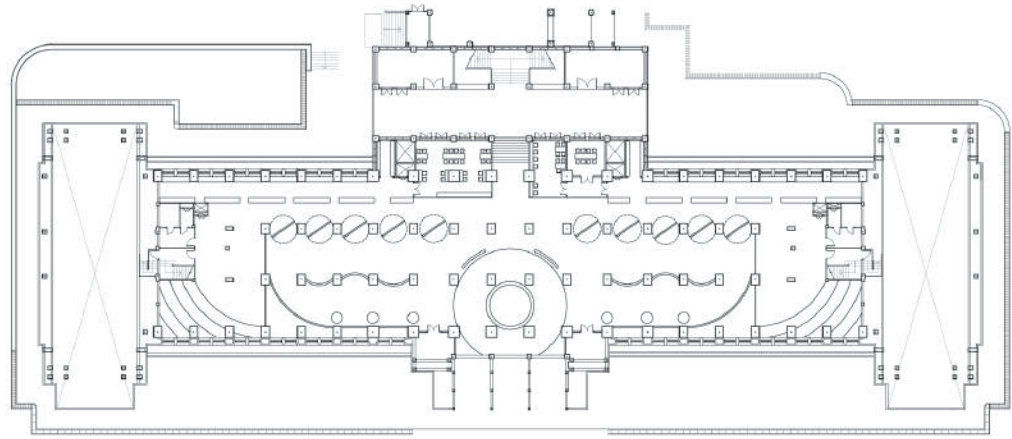

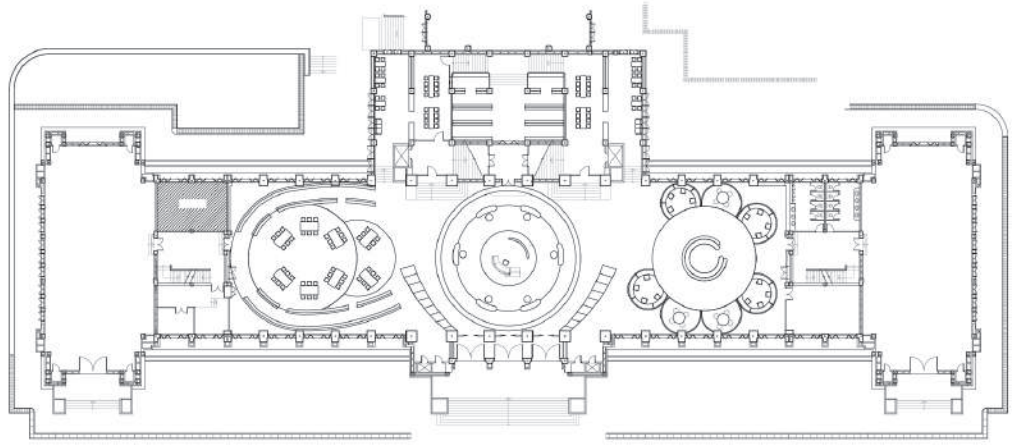

TCDC KALASIN (renovate tcdc project)

"Black Water" in Kalasin Province is translated literally as black-water, hence the name. This concept is incorporated into the design, with a focus on modern style in shades of black, water, and brown tones. Both the floor and ceiling will be tiled in black, with visible wave patterns to represent water. Additionally, there will be silk fabric hangings for decoration, as silk is a renowned product of Kalasin Province. The overall decoration emphasizes local specialties, reflecting the way of life in the Phu Thai region.

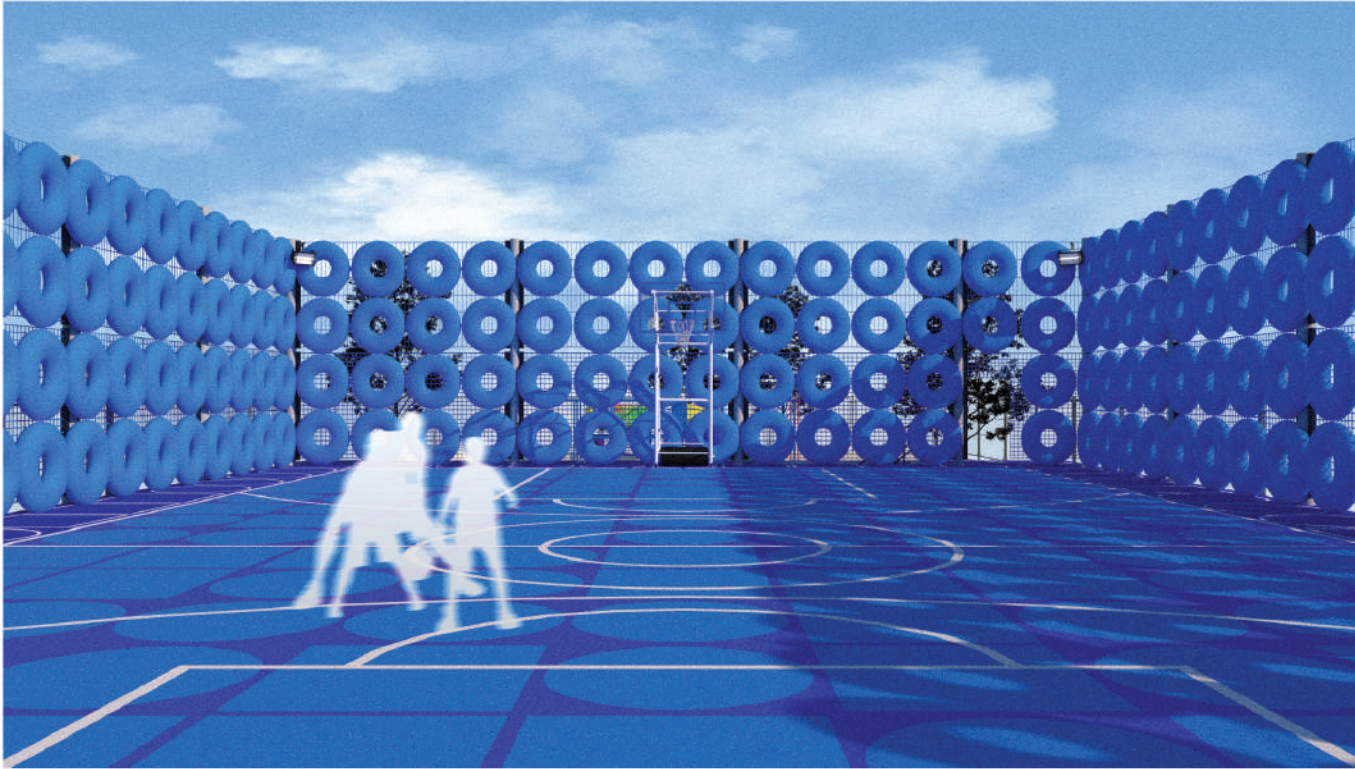

OFFICE DISCORD (vc fbrice)

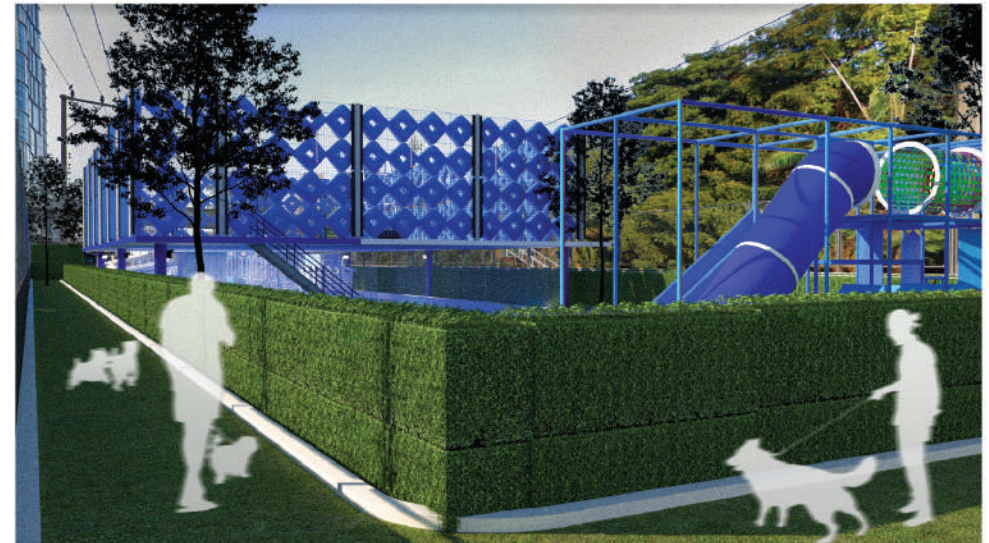

The "Discord Creative Space" is a creative area within the company where every corner of the office will have space for different sketches. Because the walls will be creatively designed as almost entirely whiteboards, not just in office areas or workrooms, but also in relaxation areas and customer reception areas. Because the Discord community is not just a space for communication but also functions for gaming and sharing ideas. Clearing every area for writing is an idea picked up for use in this project.

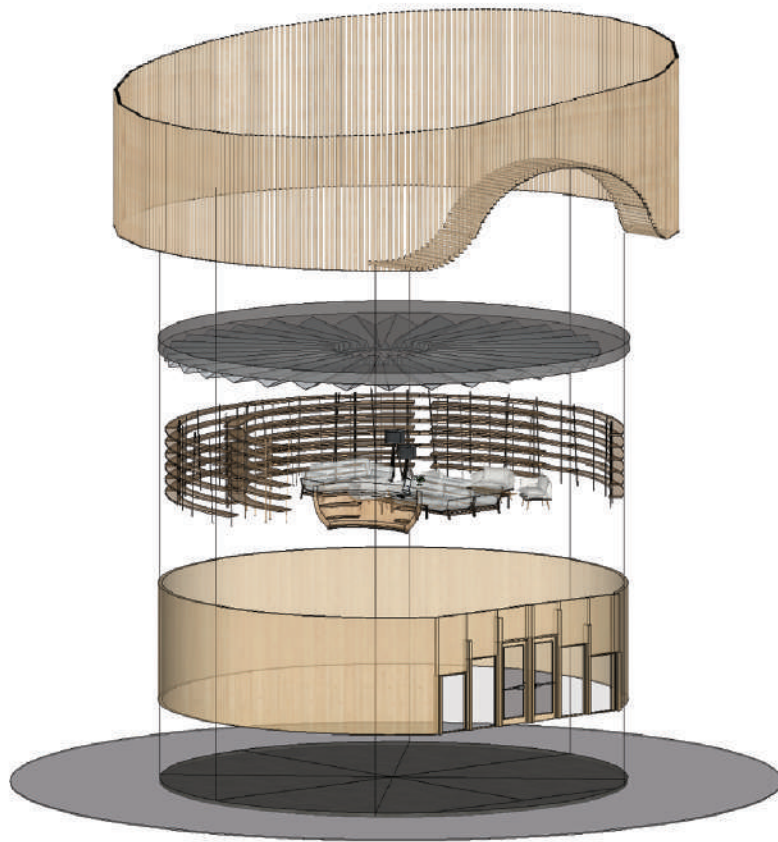

MQDC PROJECT

The concept of "Color in the Area" comes from the open space of Phra Khanong Pleasure, located adjacent to the Phra Khanong District Office and the residential area nearby. The idea is to add vibrancy to the space, which serves as an open area. Phra Khanong Pleasure is situated near a busy road, resulting in heavy traffic and limited parking space. In this design, we have added parking spaces to the front area of the site and provided areas for exercise, as well as various recreational spaces.

CORN SPACE FUNCTION

CORN SPACE (material project)

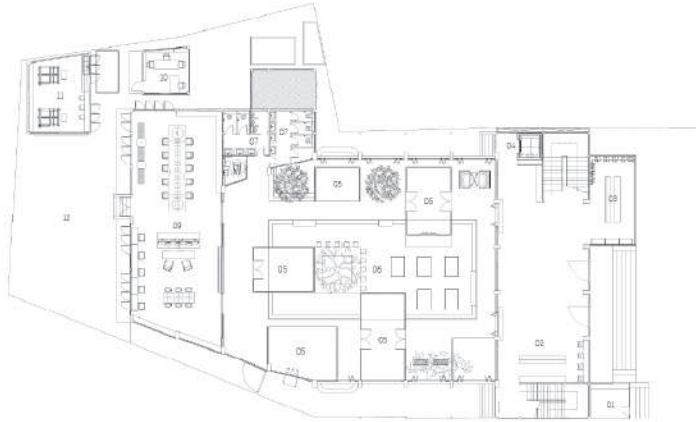

The "Corn Space" is designed in the shape of a half-shucked corn to serve as a public library located in a community and agricultural area. Materials derived from corn, such as corn husks and corn cobs, are used. The corn cob is processed to withstand fire, both in the husks and in the remaining parts of the corn cob that are not used for agriculture. These materials are repurposed to create a space that benefits the community.

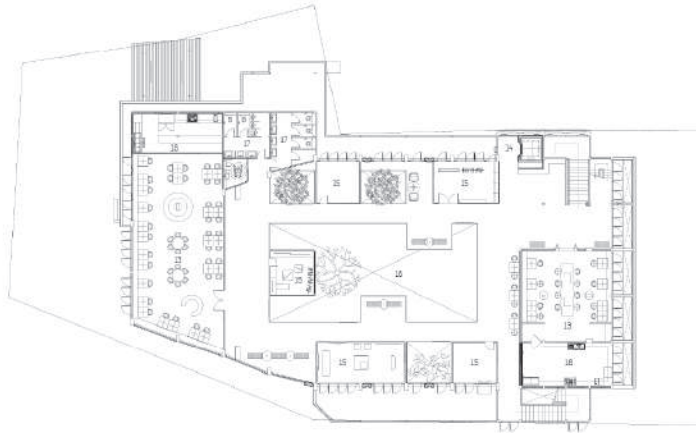

KALASIN REBRANDING PROJECT TO PROMOTE TOURISM IN THE CITY AND GENERATE I NCOME FOR THE COMMUNITY.

(thesis project)

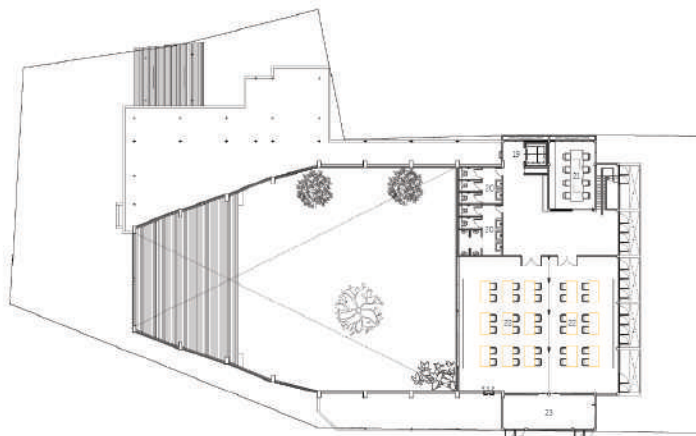

Kalasin Province is still a secondary city with no official public transportation like neighboring provinces. There are still not many pop-up modern places in the province. Therefore, we foresee an opportunity to create a new image of the province to be more modern and develop into a community mall that is a center for exhibitions, important workshops and Kalasin's identity. These include various O-TOP products that villagers have created to generate income for the community. It can also be a new tourist attraction under the concept of "Famous Luang Pho Dam, Muang Fa Daed Song Yang, Pong Lang Lum Iert, Phu Thai Culture, Praewa silk, Pha Sawei Phu Phan, Lam Pao River, and Million-year-old dinosaurs."
