Education

IPDI
[Integrated Product Design Innovation],
Faculty of Architecture,
Kasetsart University
GPAX: 3.31

Personal Details

Date of birth: 1 Nov. 2003
Age: 22
Nationality: Thai
House No. 100/3, Village No. 4,
Thung Wang Subdistrict, Mueang
Songkhla District, Songkhla Province,
90000, Thailand

Skills

Languages: Thai [Native]
English [Fair]

Technical Skills:

Proficient - Fusion 360, Canva
Competent - Rhino 3D, Adobe Illustrator, Gimp
Beginner - Adobe Photoshop

Soft Skills:

Creative Problem-Solving
Collaboration
Time Management
Analytical Thinking

Experience

2022

-Participated in an exhibition during Bangkok Design Week 2023 in the Kaset area.
-Submitted work for the 'Bangkok's Strange Tools' competition organized by Uselessland and showcased the project at TCDC Thailand.

2023

-Collaborated on designing a medicine cabinet and storage system for Phyathai 3 Hospital.

2024

-Participated in an exhibition for the Bangkok Design Week 2024 in the Hua Lamphong area on the 6th floor of the Station Hotel.
-Showcased the 'Seagrass Saver' project [from the SCRAP LAP course] at the Royal Thai Navy Convention Hall.
-Received a commendation award in the NEO UPCYCLING DESIGN CONTEST under the theme 'Discover Everyday Moments' and presented the 'MEMOIR CASTLE DESK' at NEO Factory Company.

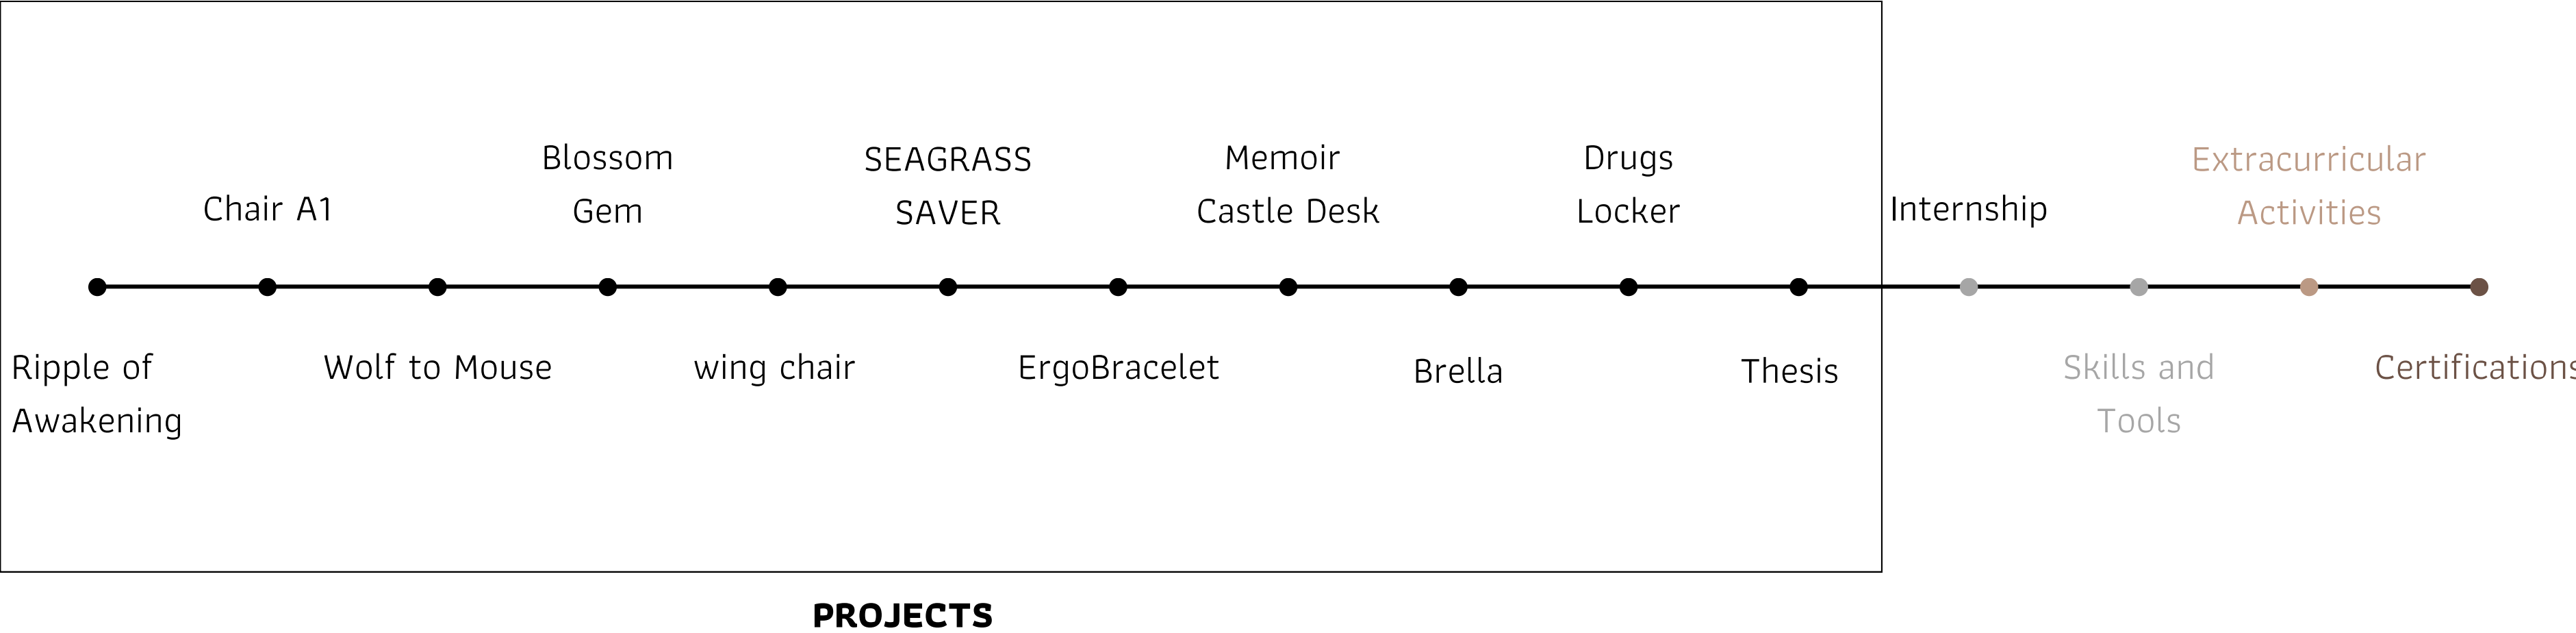

2025

-Interned at Modernform Group Public Company Limited, focusing primarily on built-in furniture design with occasional involvement in loose furniture, contributing to design development, conducting site visits, and gaining hands-on experience in workplace dynamics, teamwork, and professional workflow within a corporate design environment.

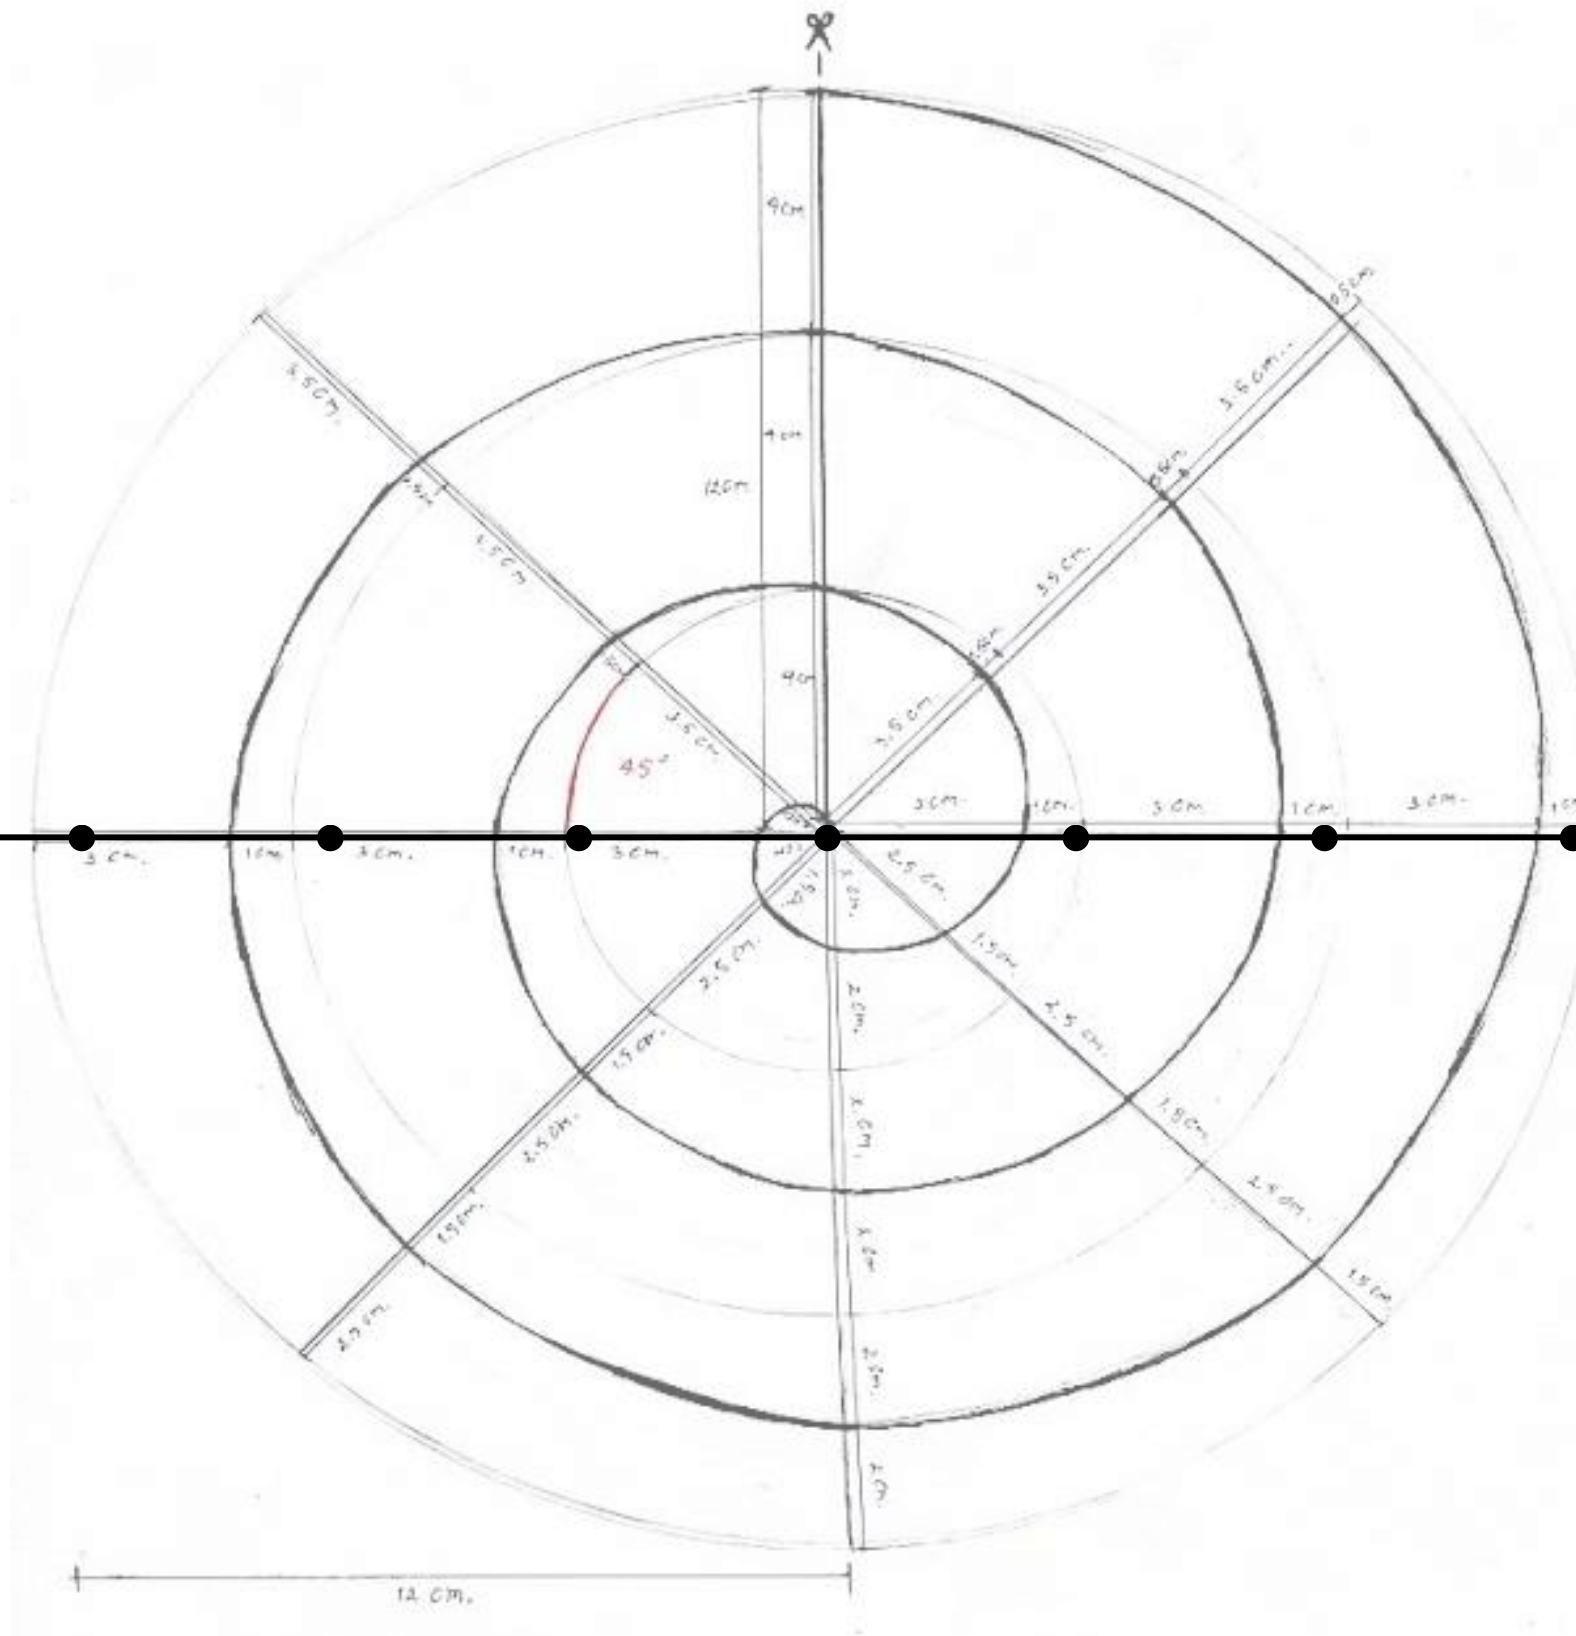

Thesis Project

รั้อยรูป (ROI-ROPE) Developed a thesis project reinterpreting traditional Thai garlands into contemporary jewelry and lifestyle products using deconstruction and material preservation techniques to transform temporary flowers into durable, meaningful objects.

CONTENT

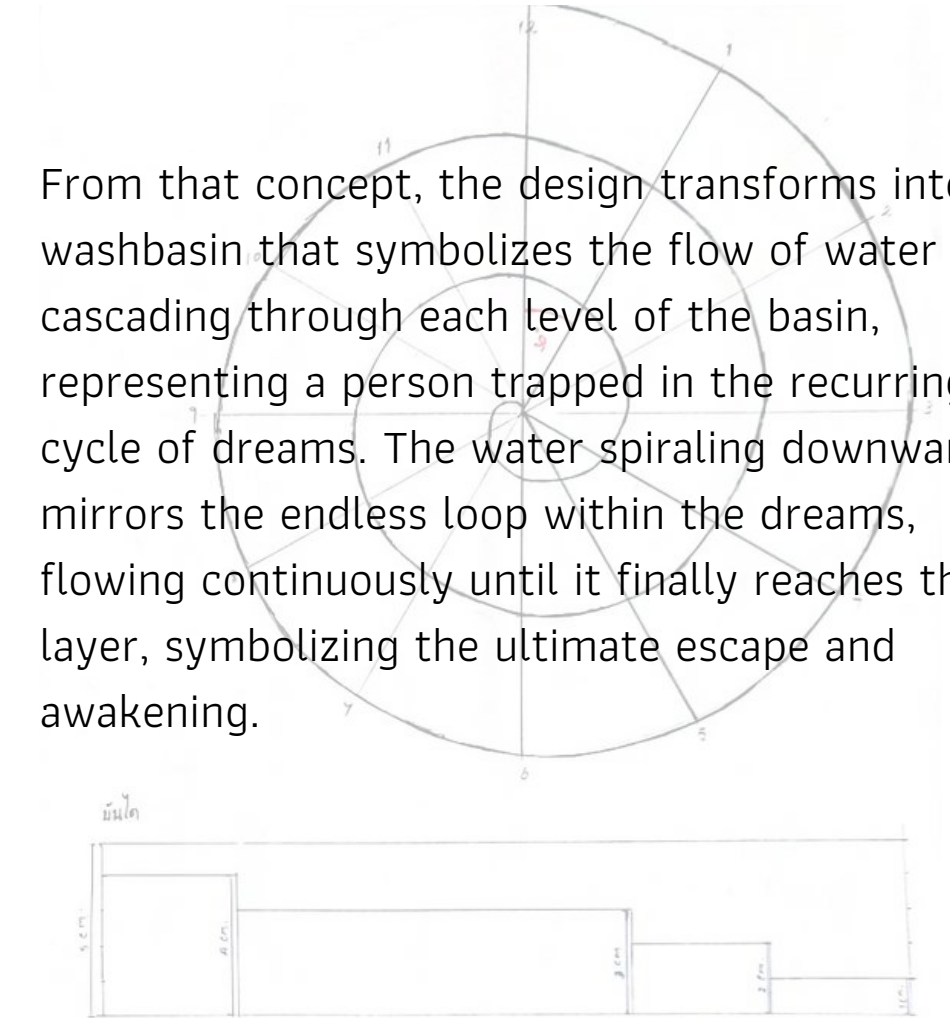

Ripple of
Awakening

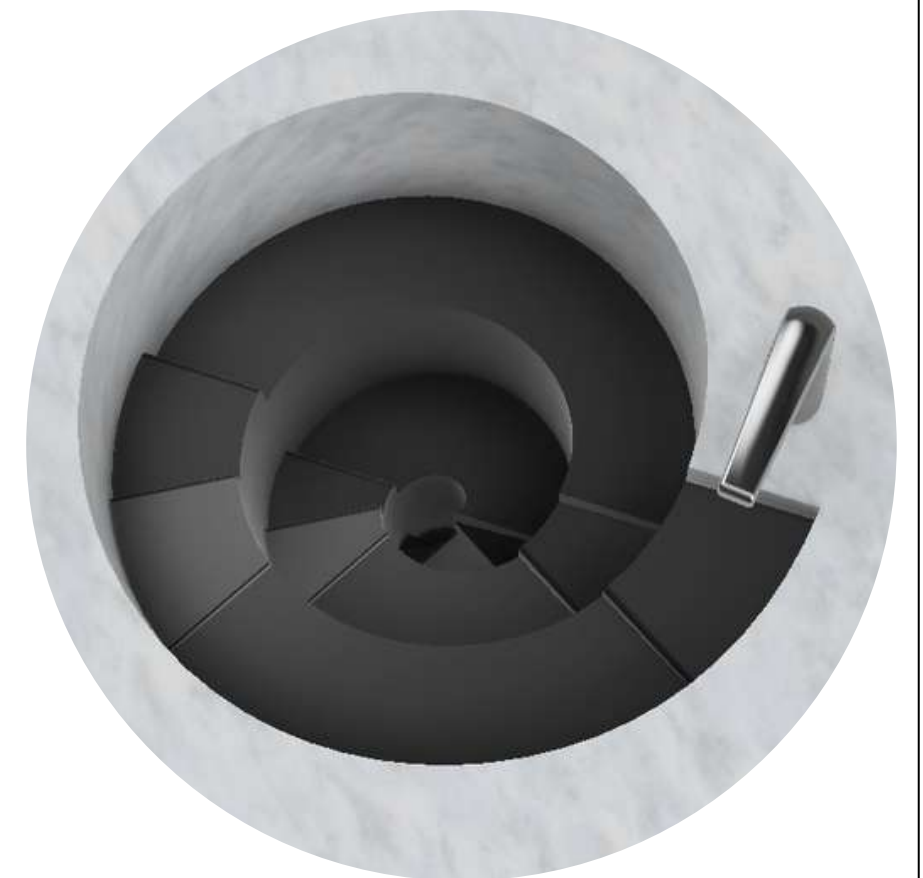

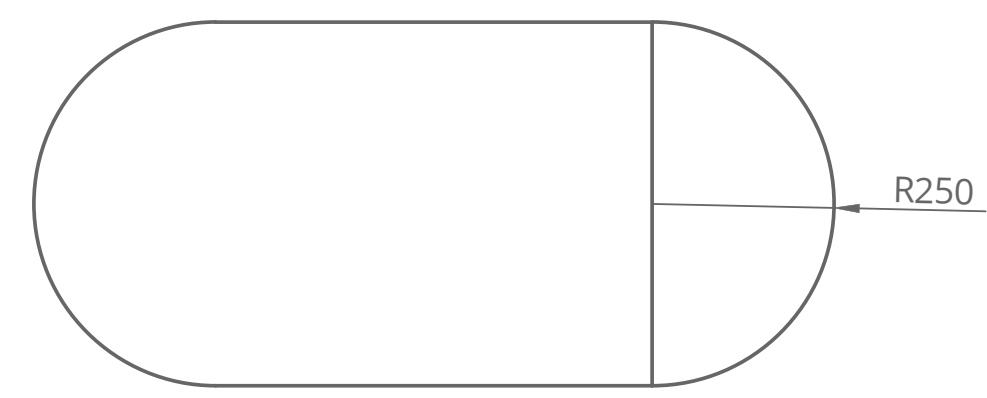

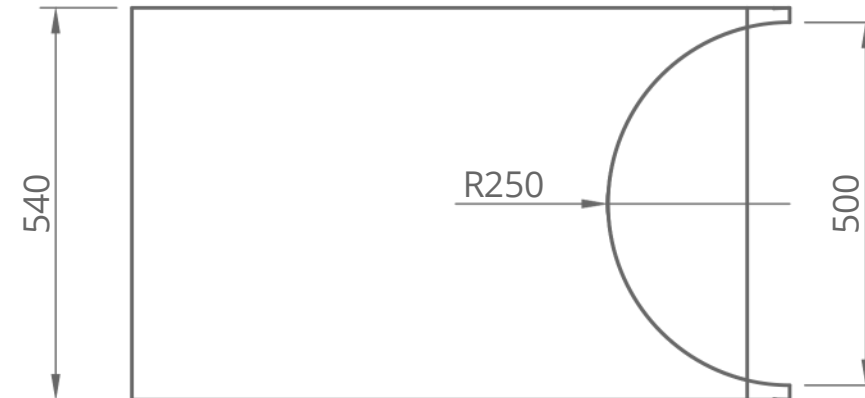

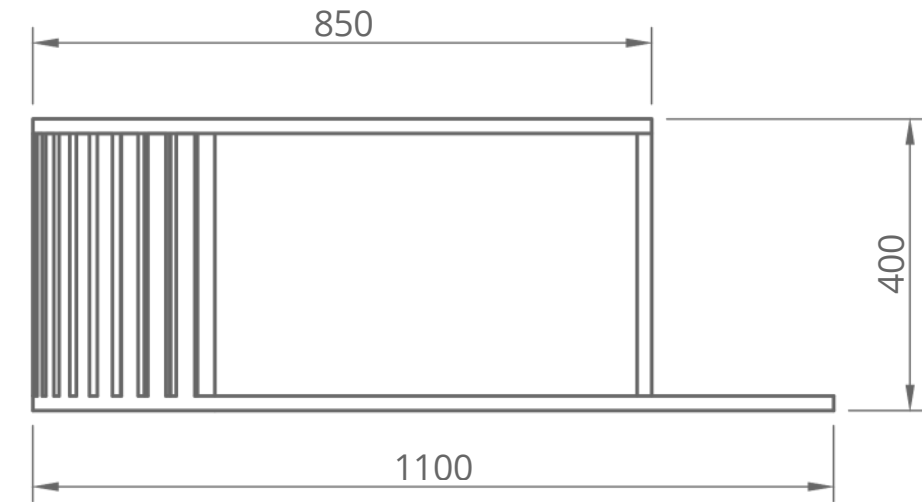

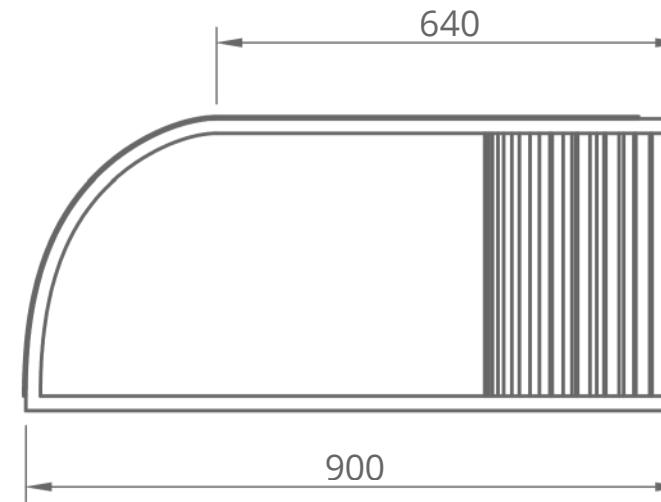

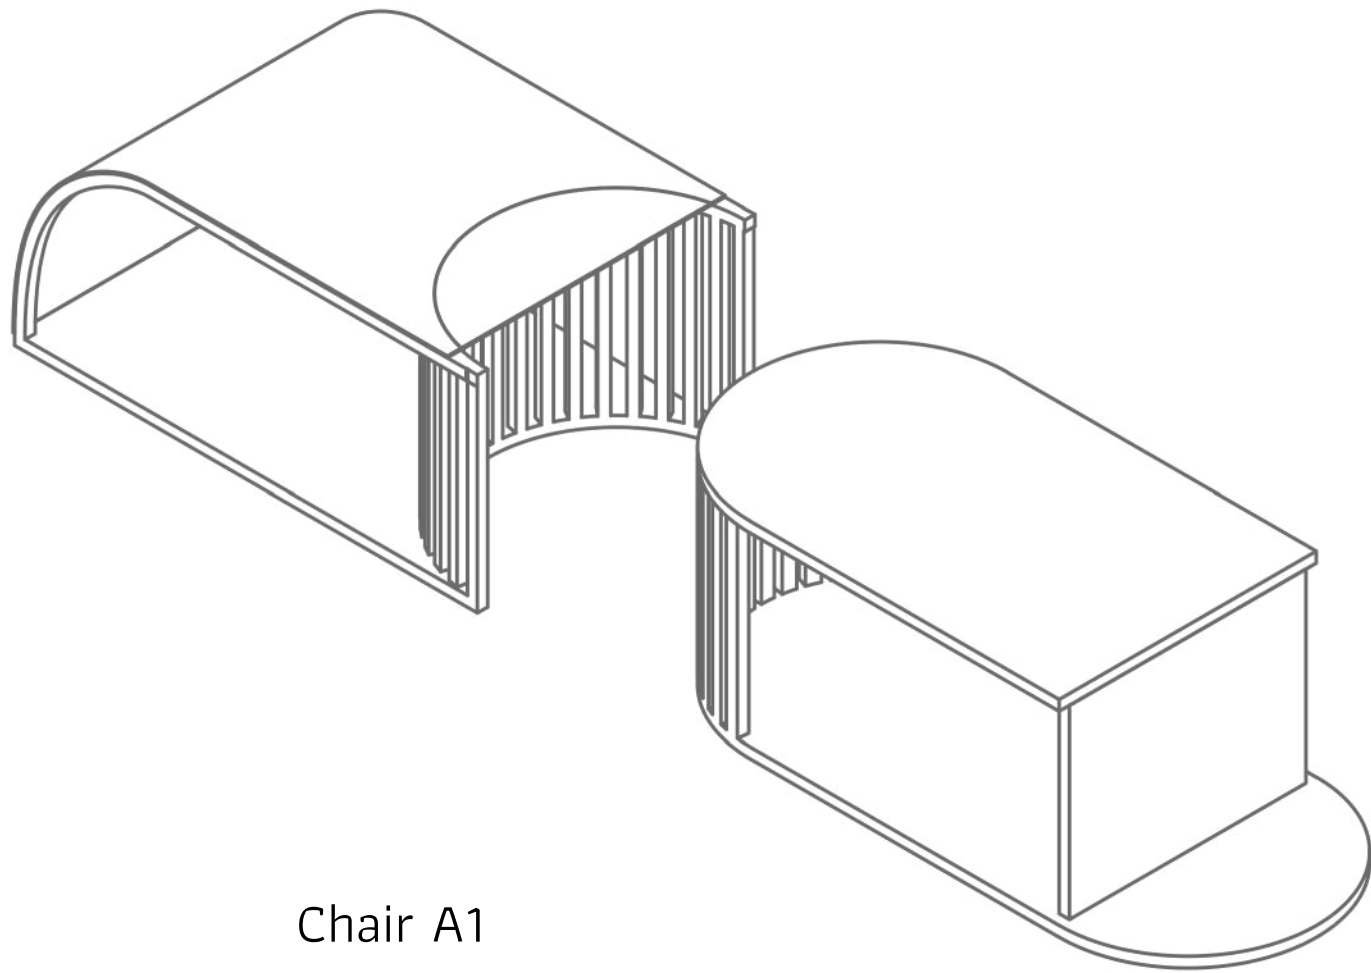

RIPPLE OF AWAKENING

From that concept, the design transforms into a washbasin that symbolizes the flow of water cascading through each level of the basin, representing a person trapped in the recurring cycle of dreams. The water spiraling downward mirrors the endless loop within the dreams, flowing continuously until it finally reaches the last layer, symbolizing the ultimate escape and awakening.

A spiral with multiple steps on each level, repeated identically across every layer except the final one. Each step symbolizes an awakening within that particular layer of the dream. The narrative in each dream layer is the same: waking up to the sound of an alarm clock set for the morning routine, preparing for the day before leaving for work. During the routine, there are moments of dozing off, only to be interrupted by the persistent sound of an alarm clock in the dream, prompting the character to wake up, turn it off, and continue the routine before heading out. This cycle repeats multiple times. In the final instance, the alarm clock rings again, but this time, there is no alarm clock to turn off. Startled, the character wakes up and realizes the entire sequence was just a dream.

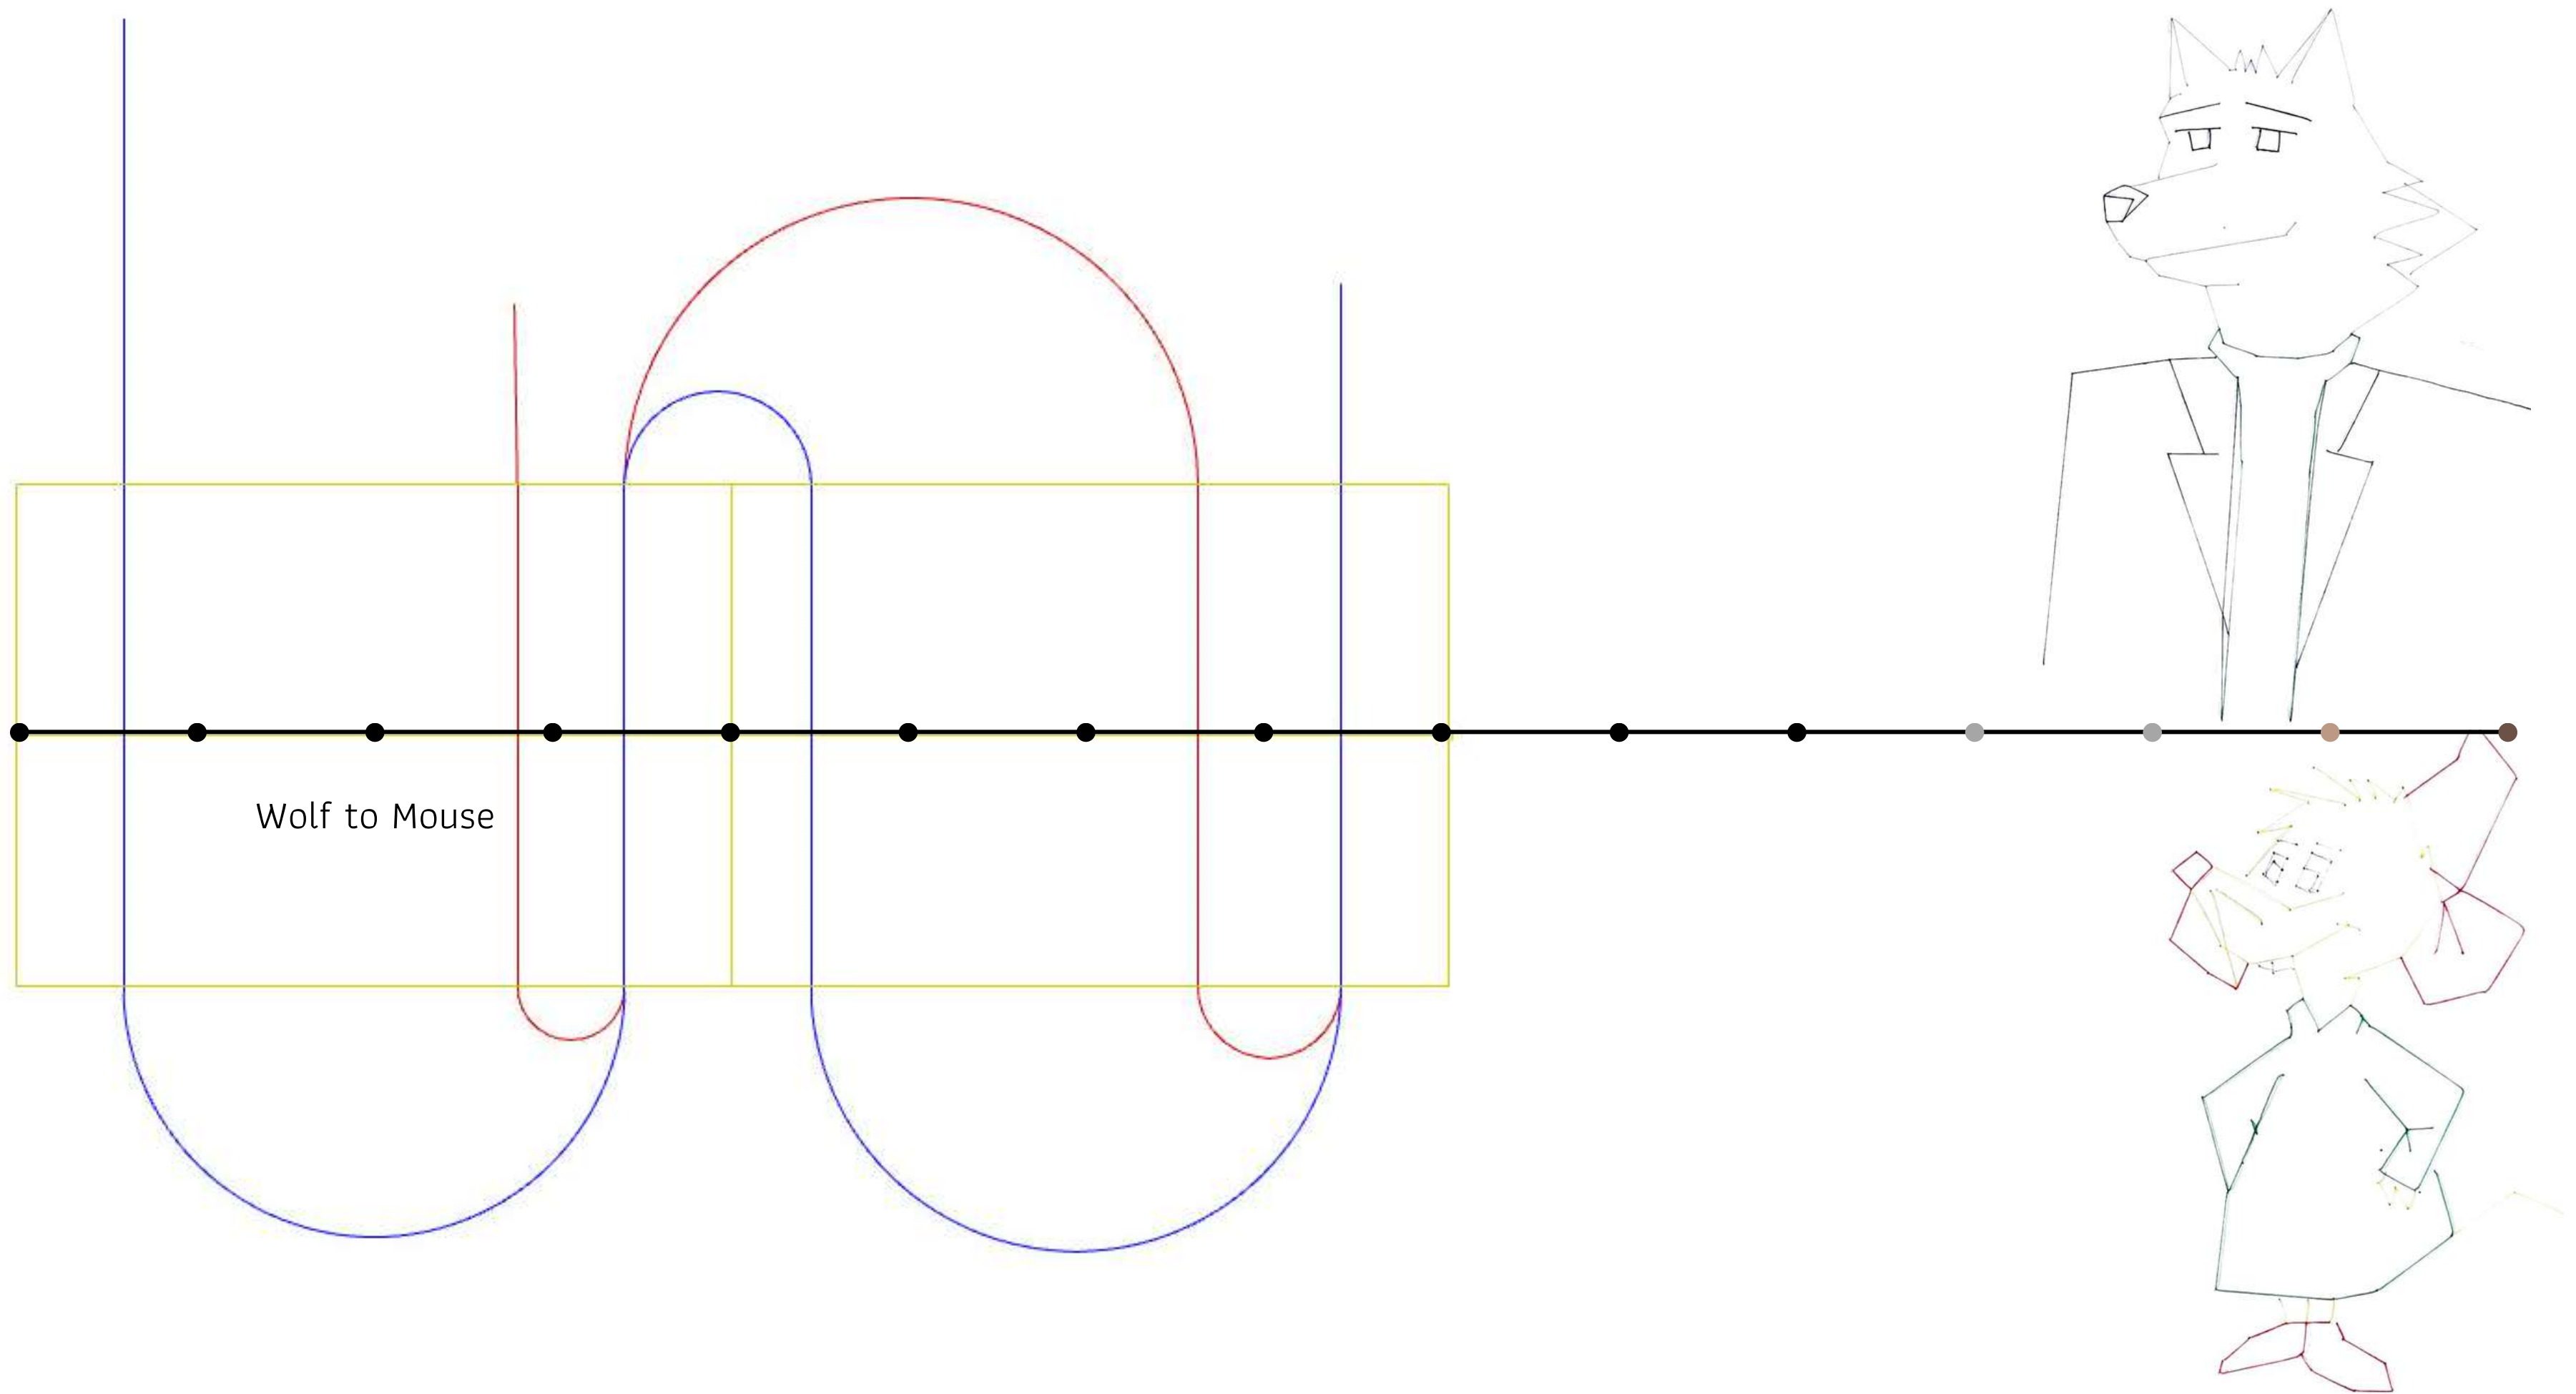

CHAIR A1

Harmony of Curves and Craftsmanship

Chair A1 is a dual-seat design that combines circular and rectangular geometries to create a distinctive slot-like shape. The curved sections feature slatted details, enhancing the chair's elegant curvature while ensuring ease of construction. The second seat incorporates flat woven rope, adding a touch of craftsmanship that complements the overall curves of the design. This harmonious blend of form and function brings both aesthetic appeal and comfort to any space.

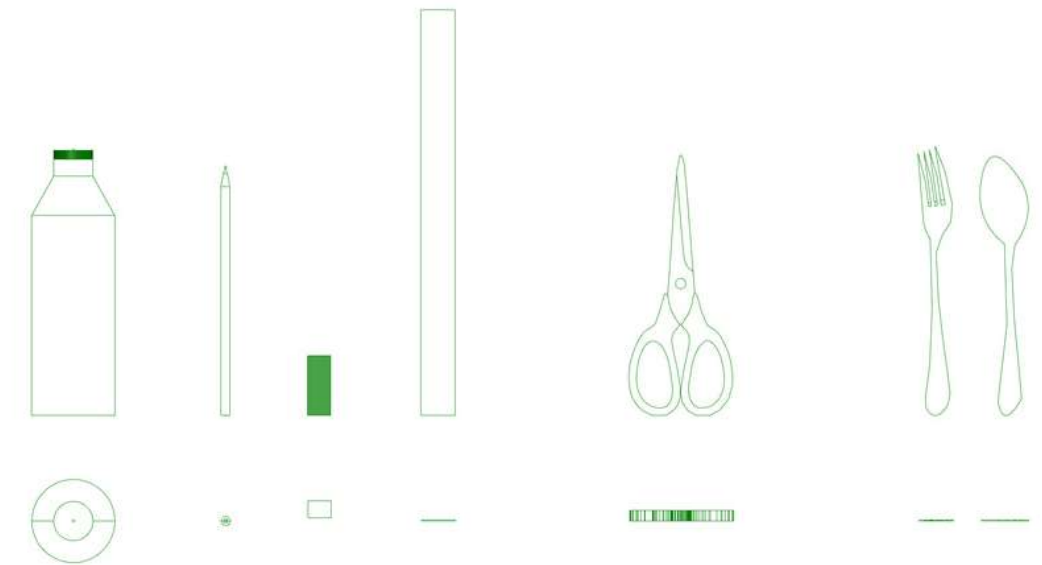

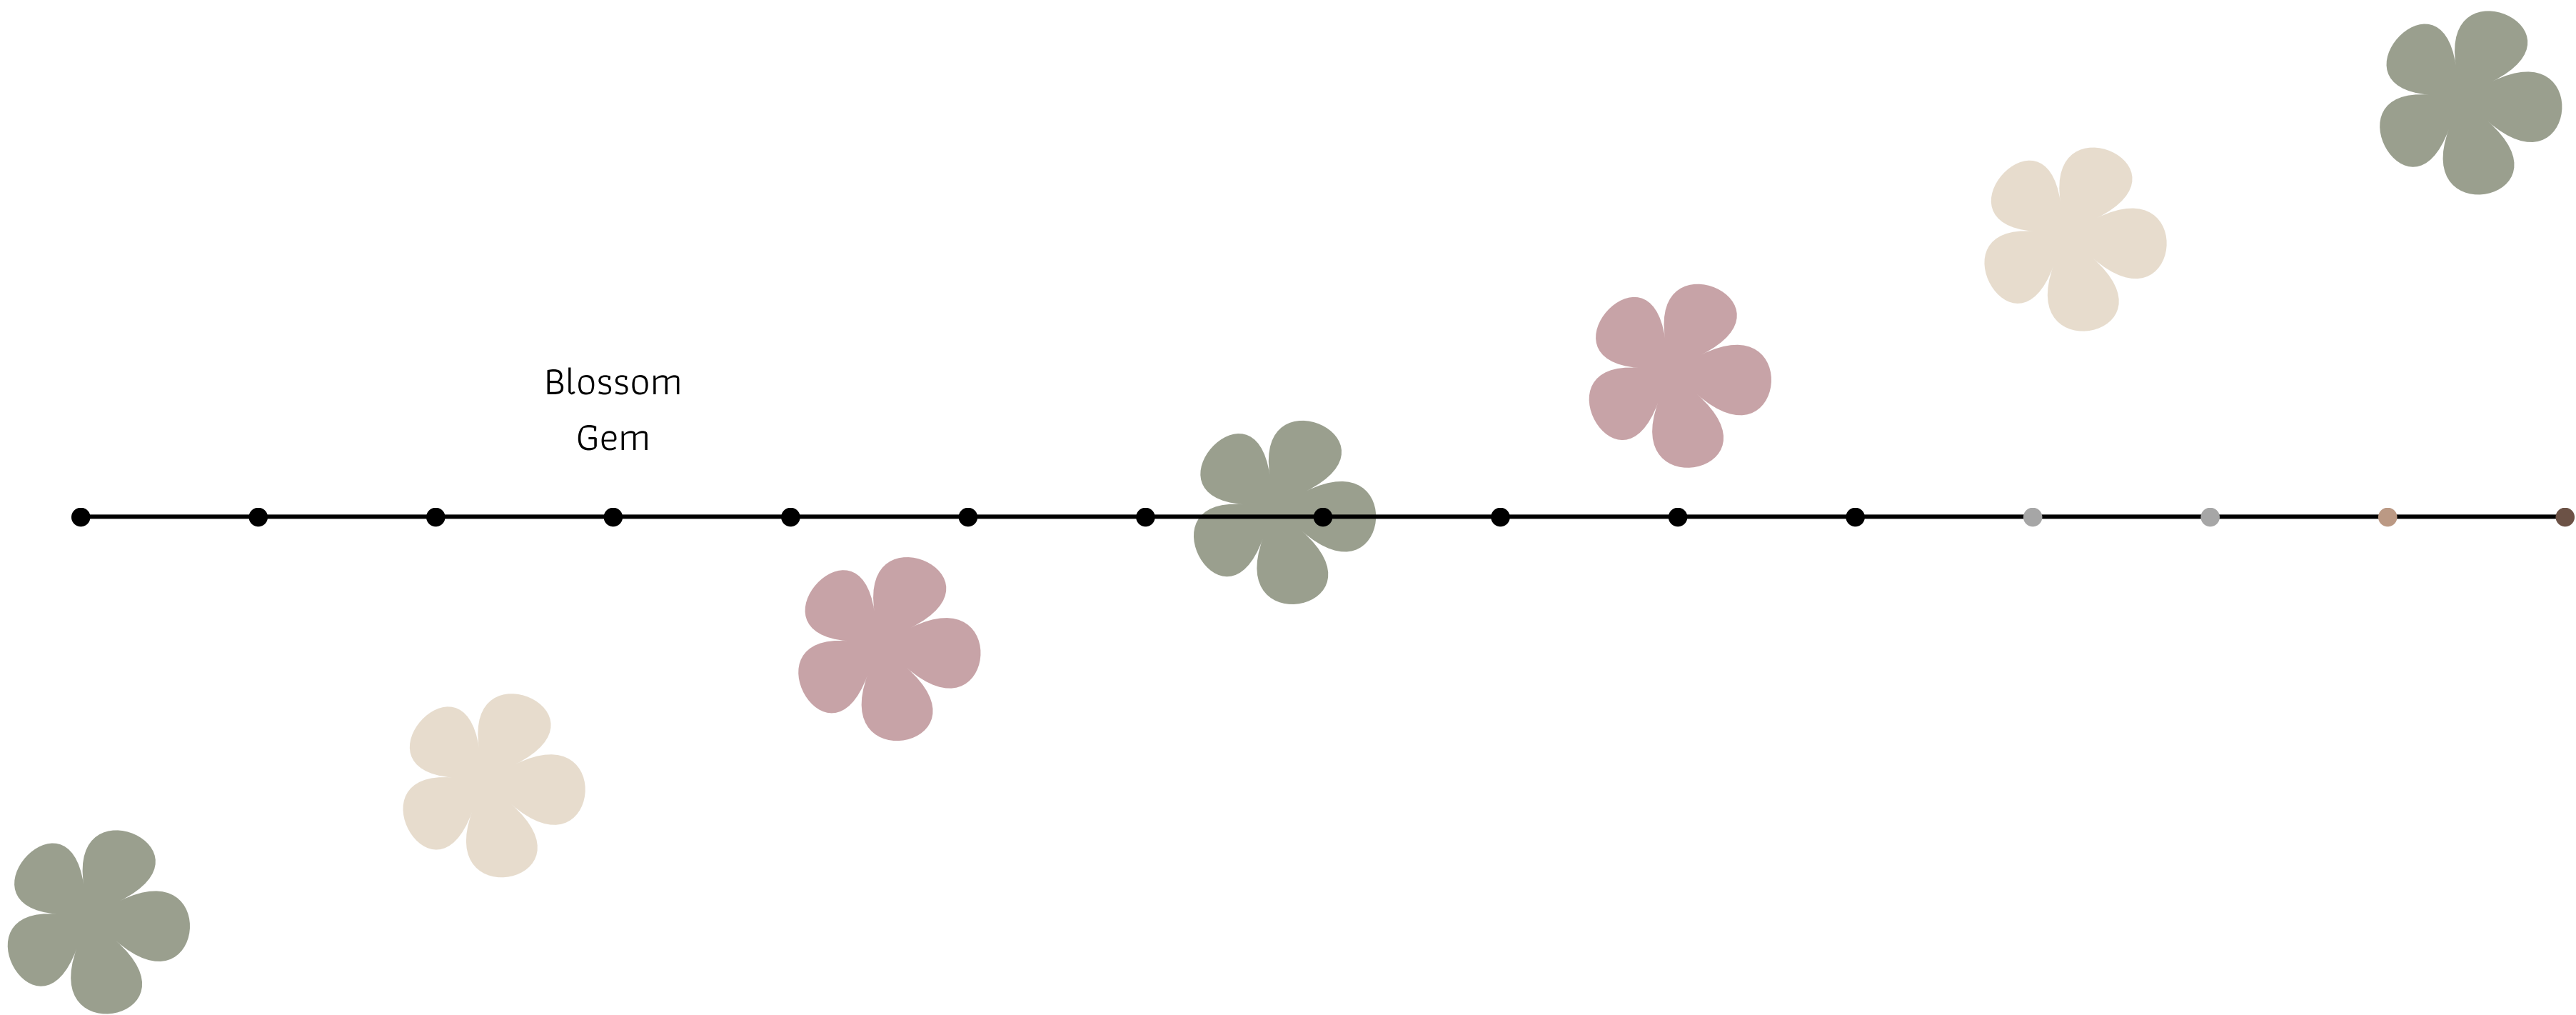

Wolf to Mouse

Dynamic Desk Organizer

Inspired by the dual impressions of a friend—first appearing as a cool and quiet 'wolf,' but later revealing a playful and charming 'mouse' personality full of lively tones. This desk organizer embodies these contrasting traits through its dynamic design, using threads or wire-like elements to reflect the friend's unique creative style. Adjustable in size, it keeps desk items neatly arranged while adding a touch of fun and personality, seamlessly blending the boldness of the wolf with the cuteness of the mouse.

BLOSSOM GEM

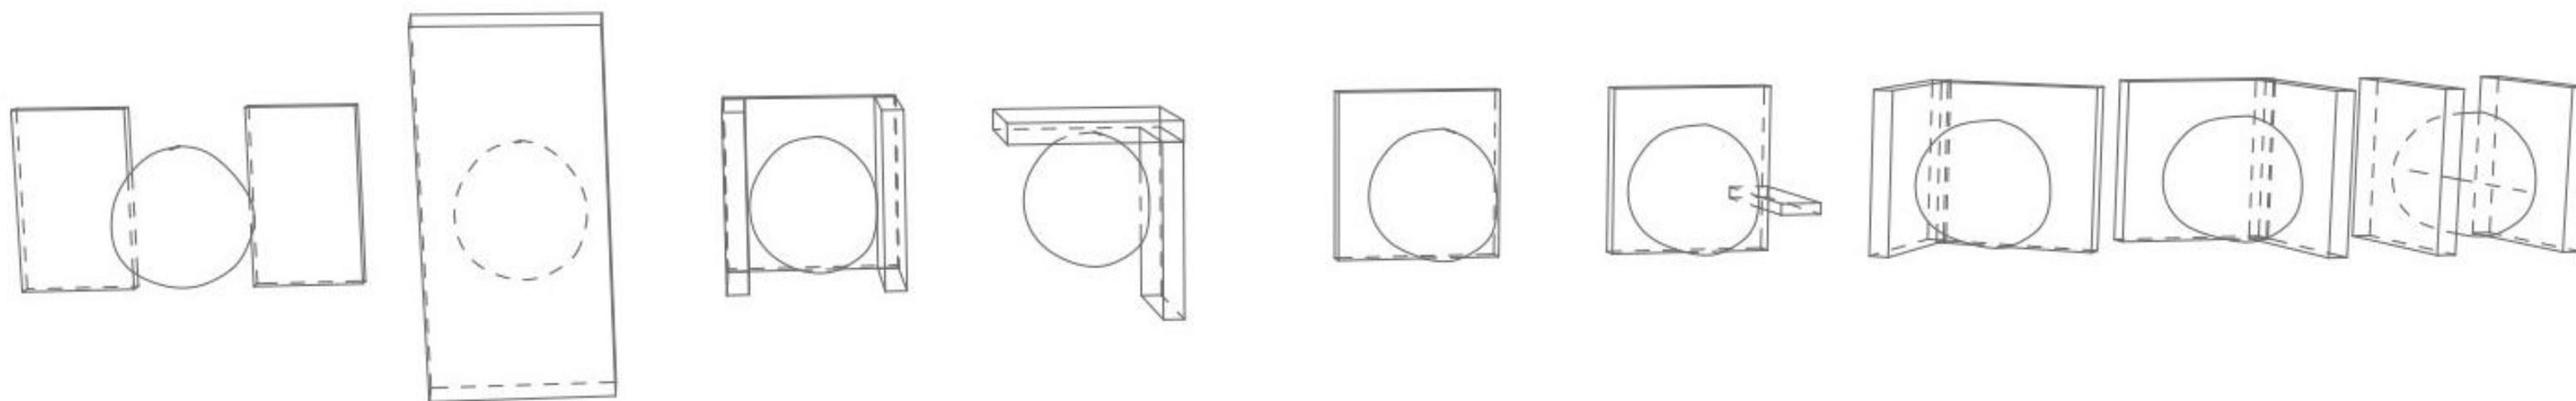

"Sustainable Elegance: Where Function Meets Playfulness"

Our product redefines packaging with a focus on sustainability and creativity. Designed with the environment in mind, our eco-friendly materials not only reduce waste but also inspire interaction.

Each package transforms into a functional storage or decorative piece, blending cuteness with practicality. By inviting customers to assemble and reuse their packaging, we create a memorable experience that reflects our commitment to sustainable living and innovative design.

Let every piece tell a story—yours and ours—while leaving a lighter footprint on the planet.

wing chair

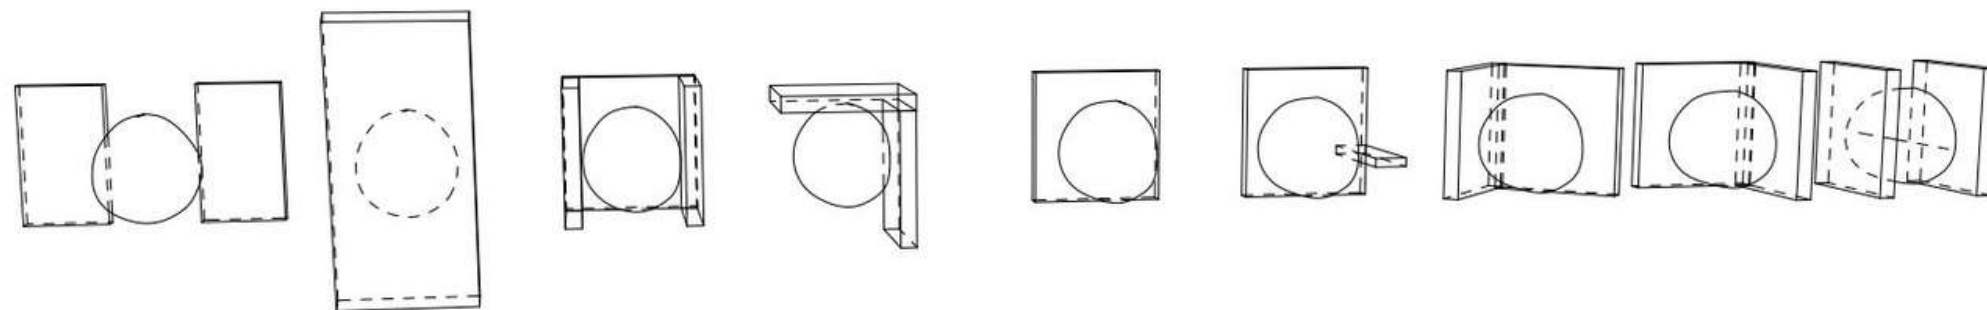

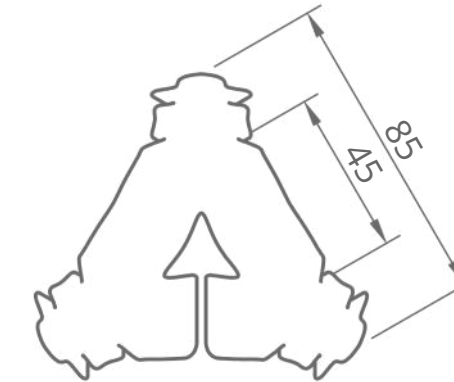

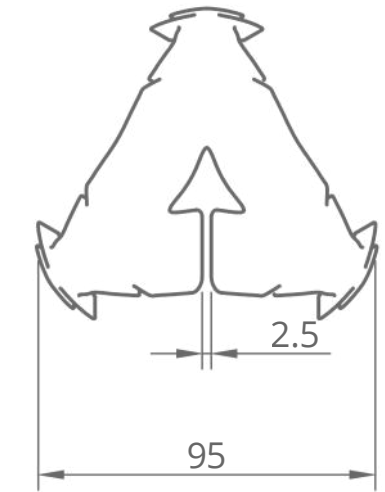

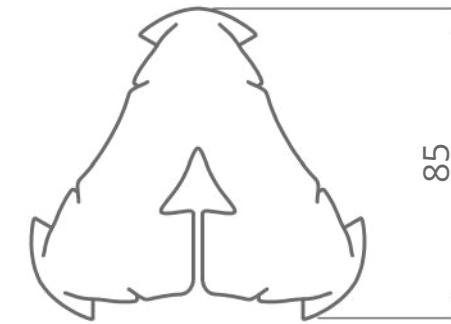

WING CHAIR

COMFORTABLE NAPS ANYTIME

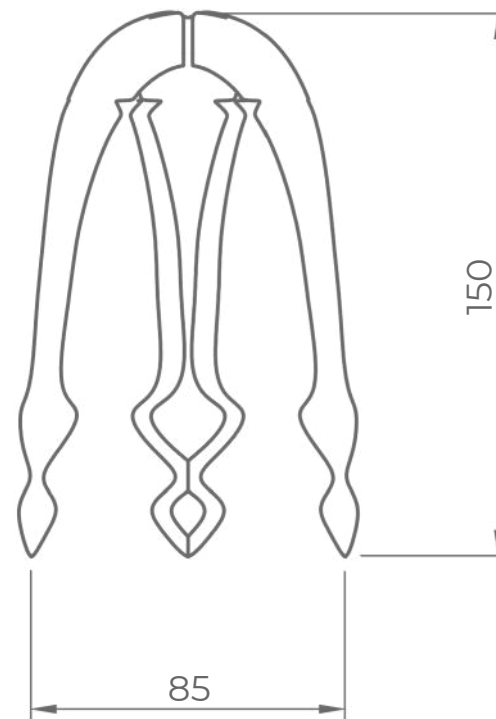

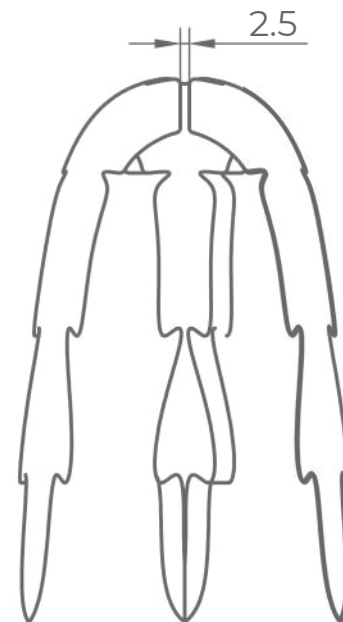

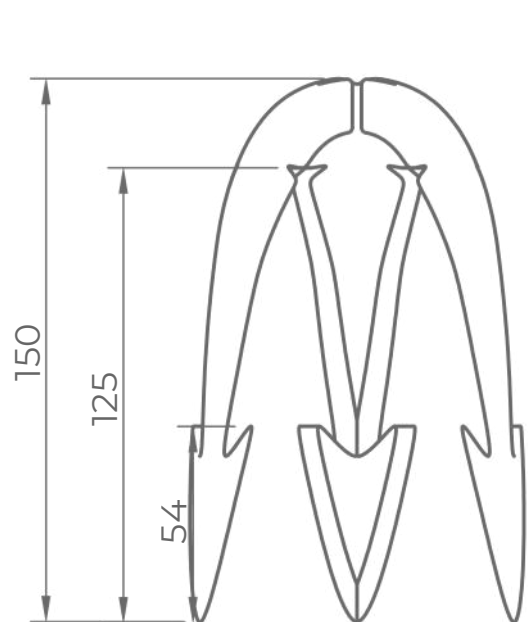

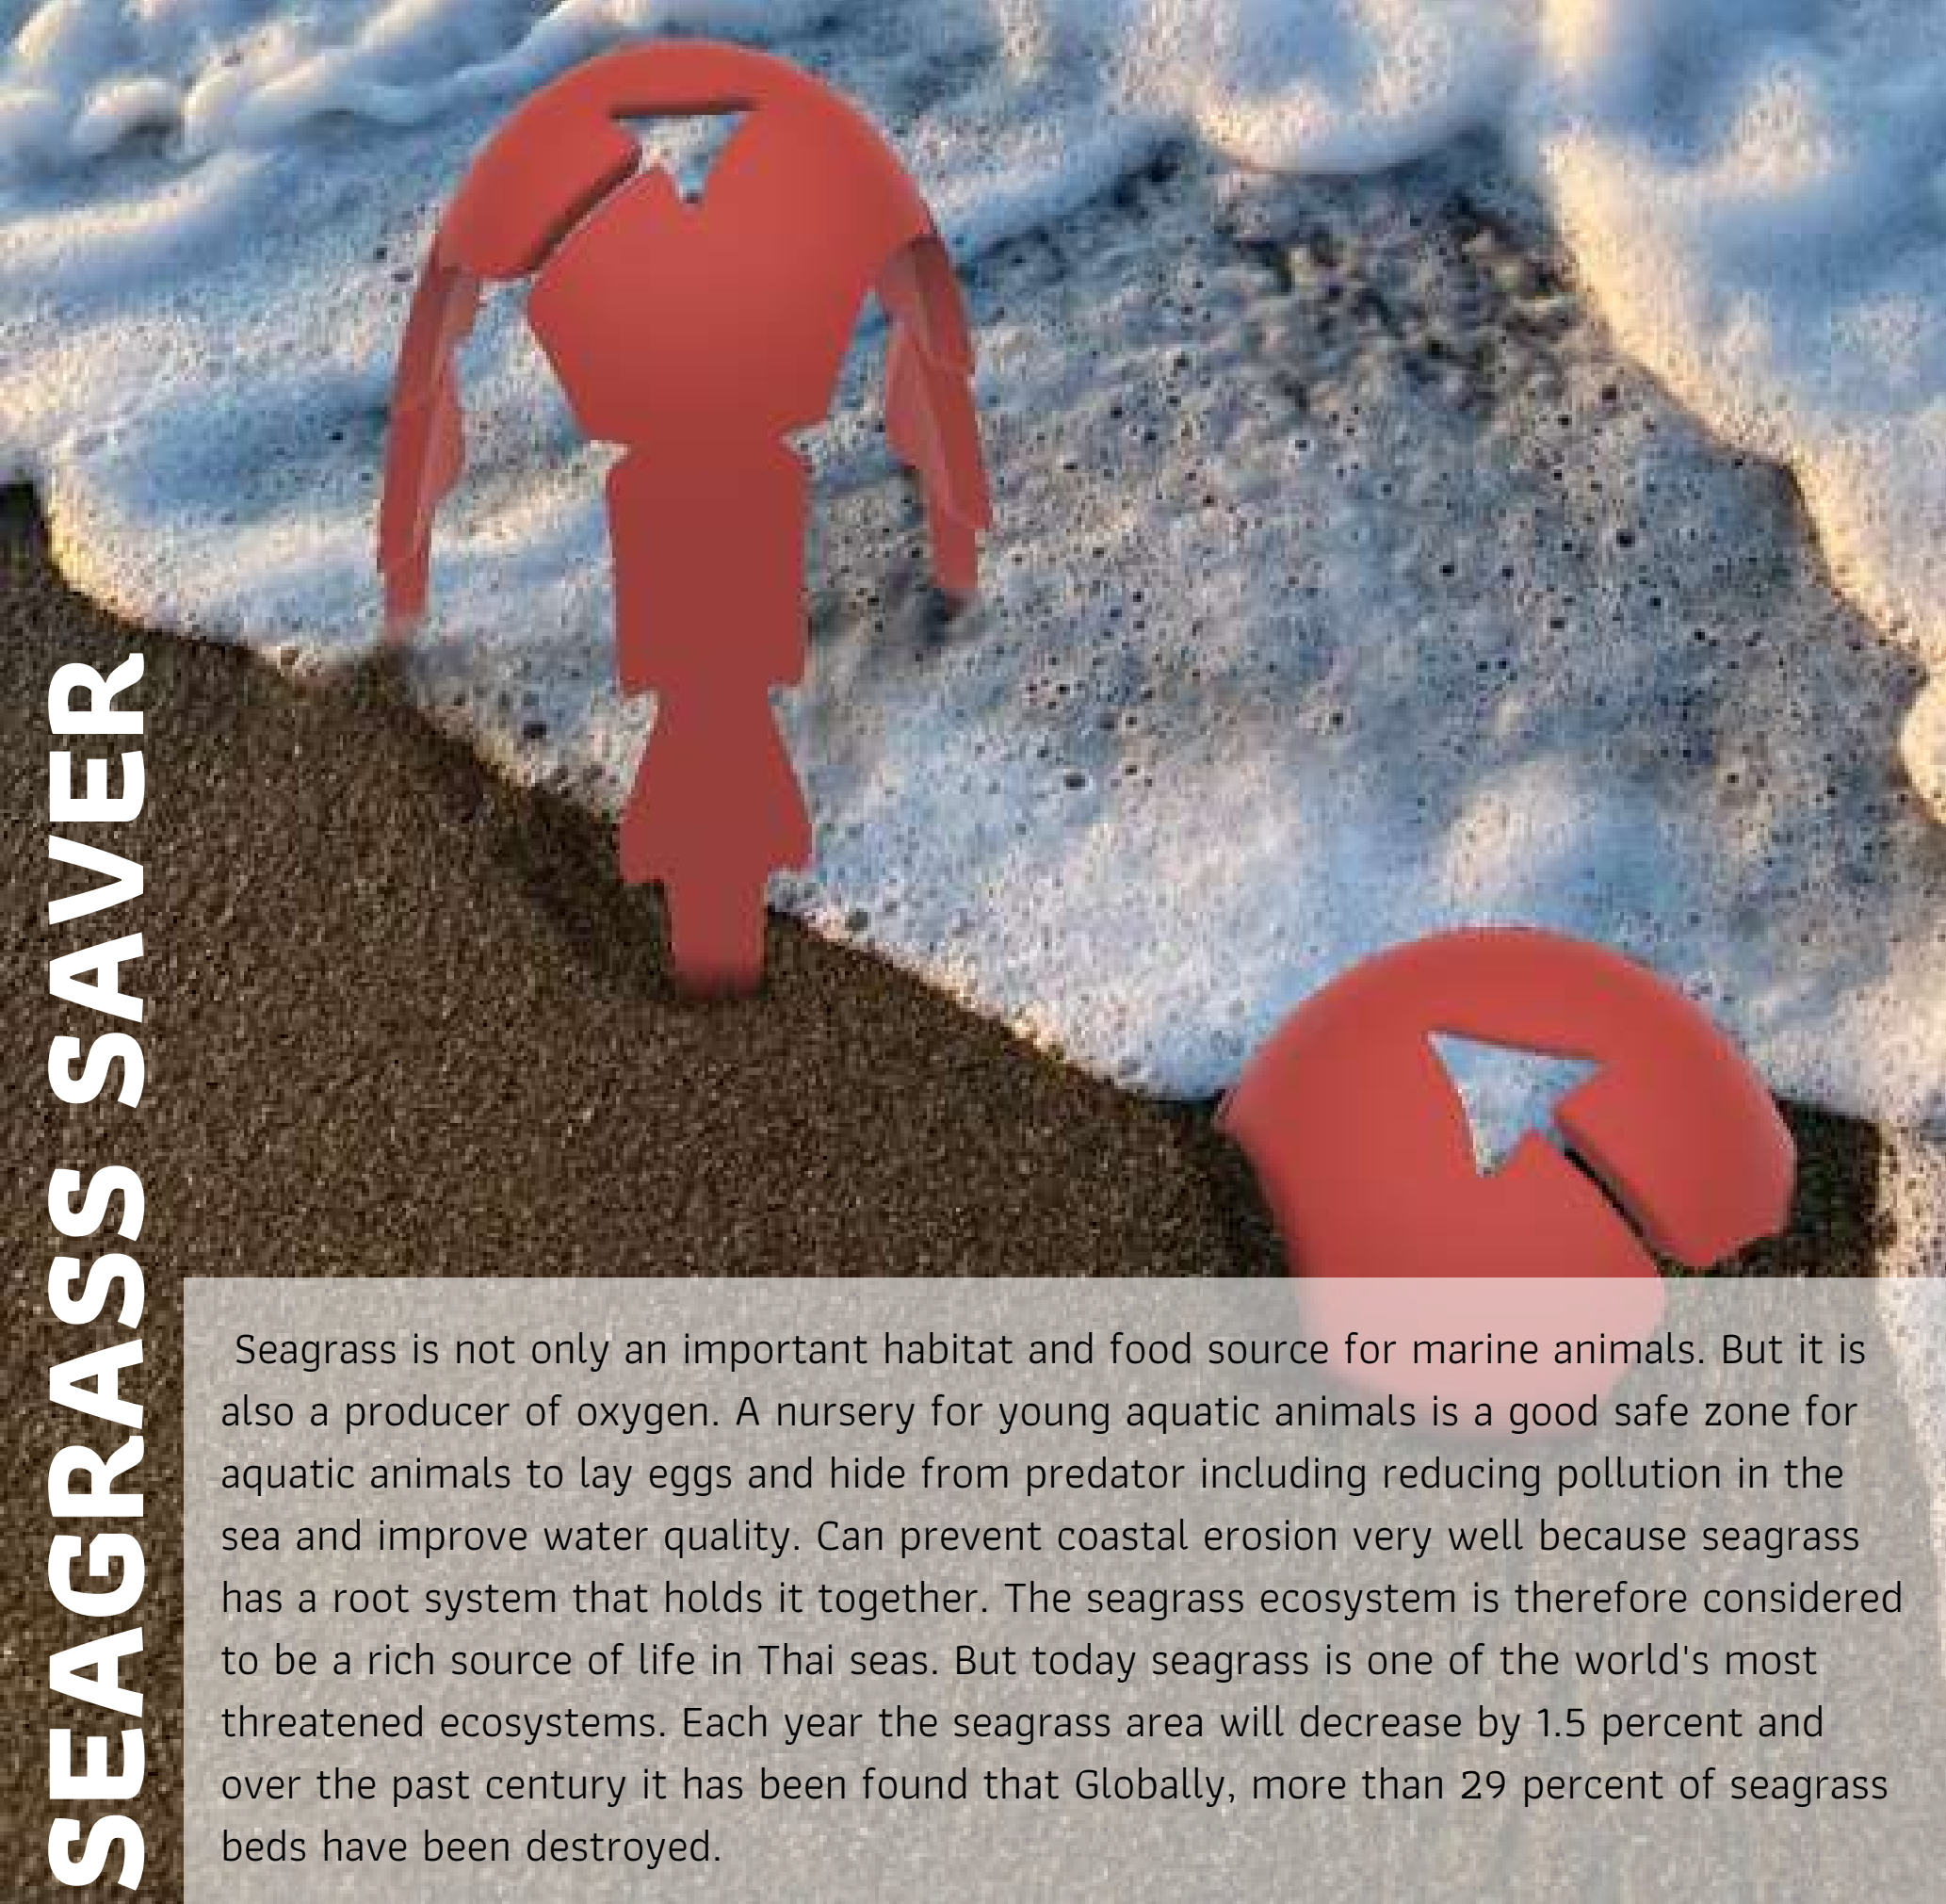

This innovative 'Wing Chair' attachment solves the issue of head drooping during naps, commonly caused by low-backed chairs that lack proper head support. The design incorporates two planes—one behind the head and one on a single side—to stabilize the head without feeling restrictive. Easily attachable to chairs with low backrests, this solution transforms ordinary seating into a supportive nap-friendly space, ensuring comfort and uninterrupted rest.

SEAGRASS
SAVER

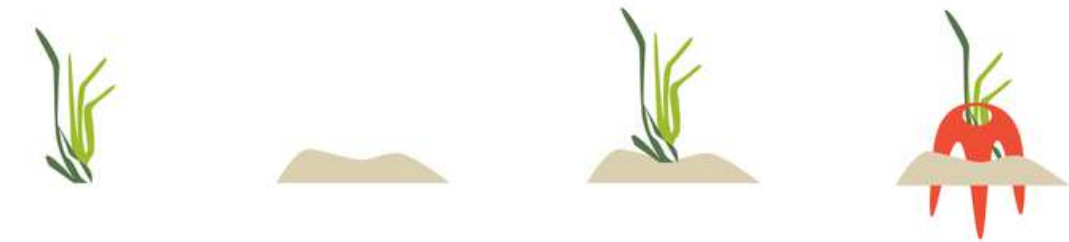

SEAGRASS SAVER

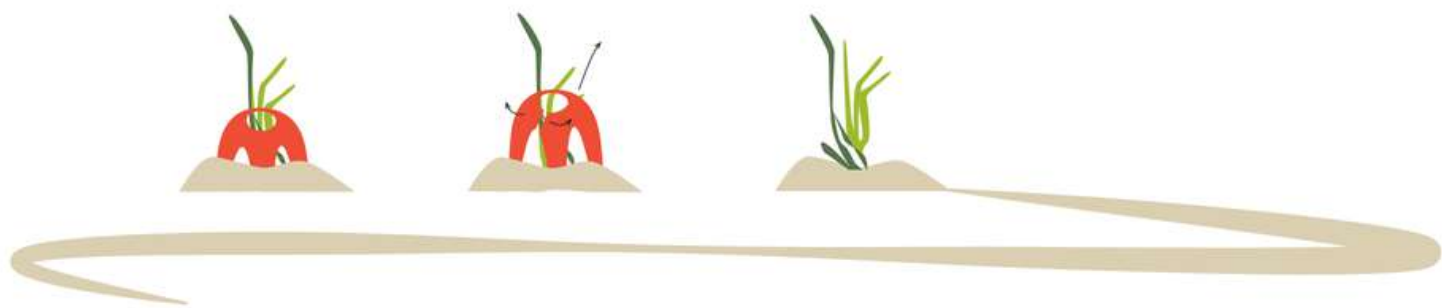

Seagrass is not only an important habitat and food source for marine animals. But it is also a producer of oxygen. A nursery for young aquatic animals is a good safe zone for aquatic animals to lay eggs and hide from predator including reducing pollution in the sea and improve water quality. Can prevent coastal erosion very well because seagrass has a root system that holds it together. The seagrass ecosystem is therefore considered to be a rich source of life in Thai seas. But today seagrass is one of the world's most threatened ecosystems. Each year the seagrass area will decrease by 1.5 percent and over the past century it has been found that Globally, more than 29 percent of seagrass beds have been destroyed.

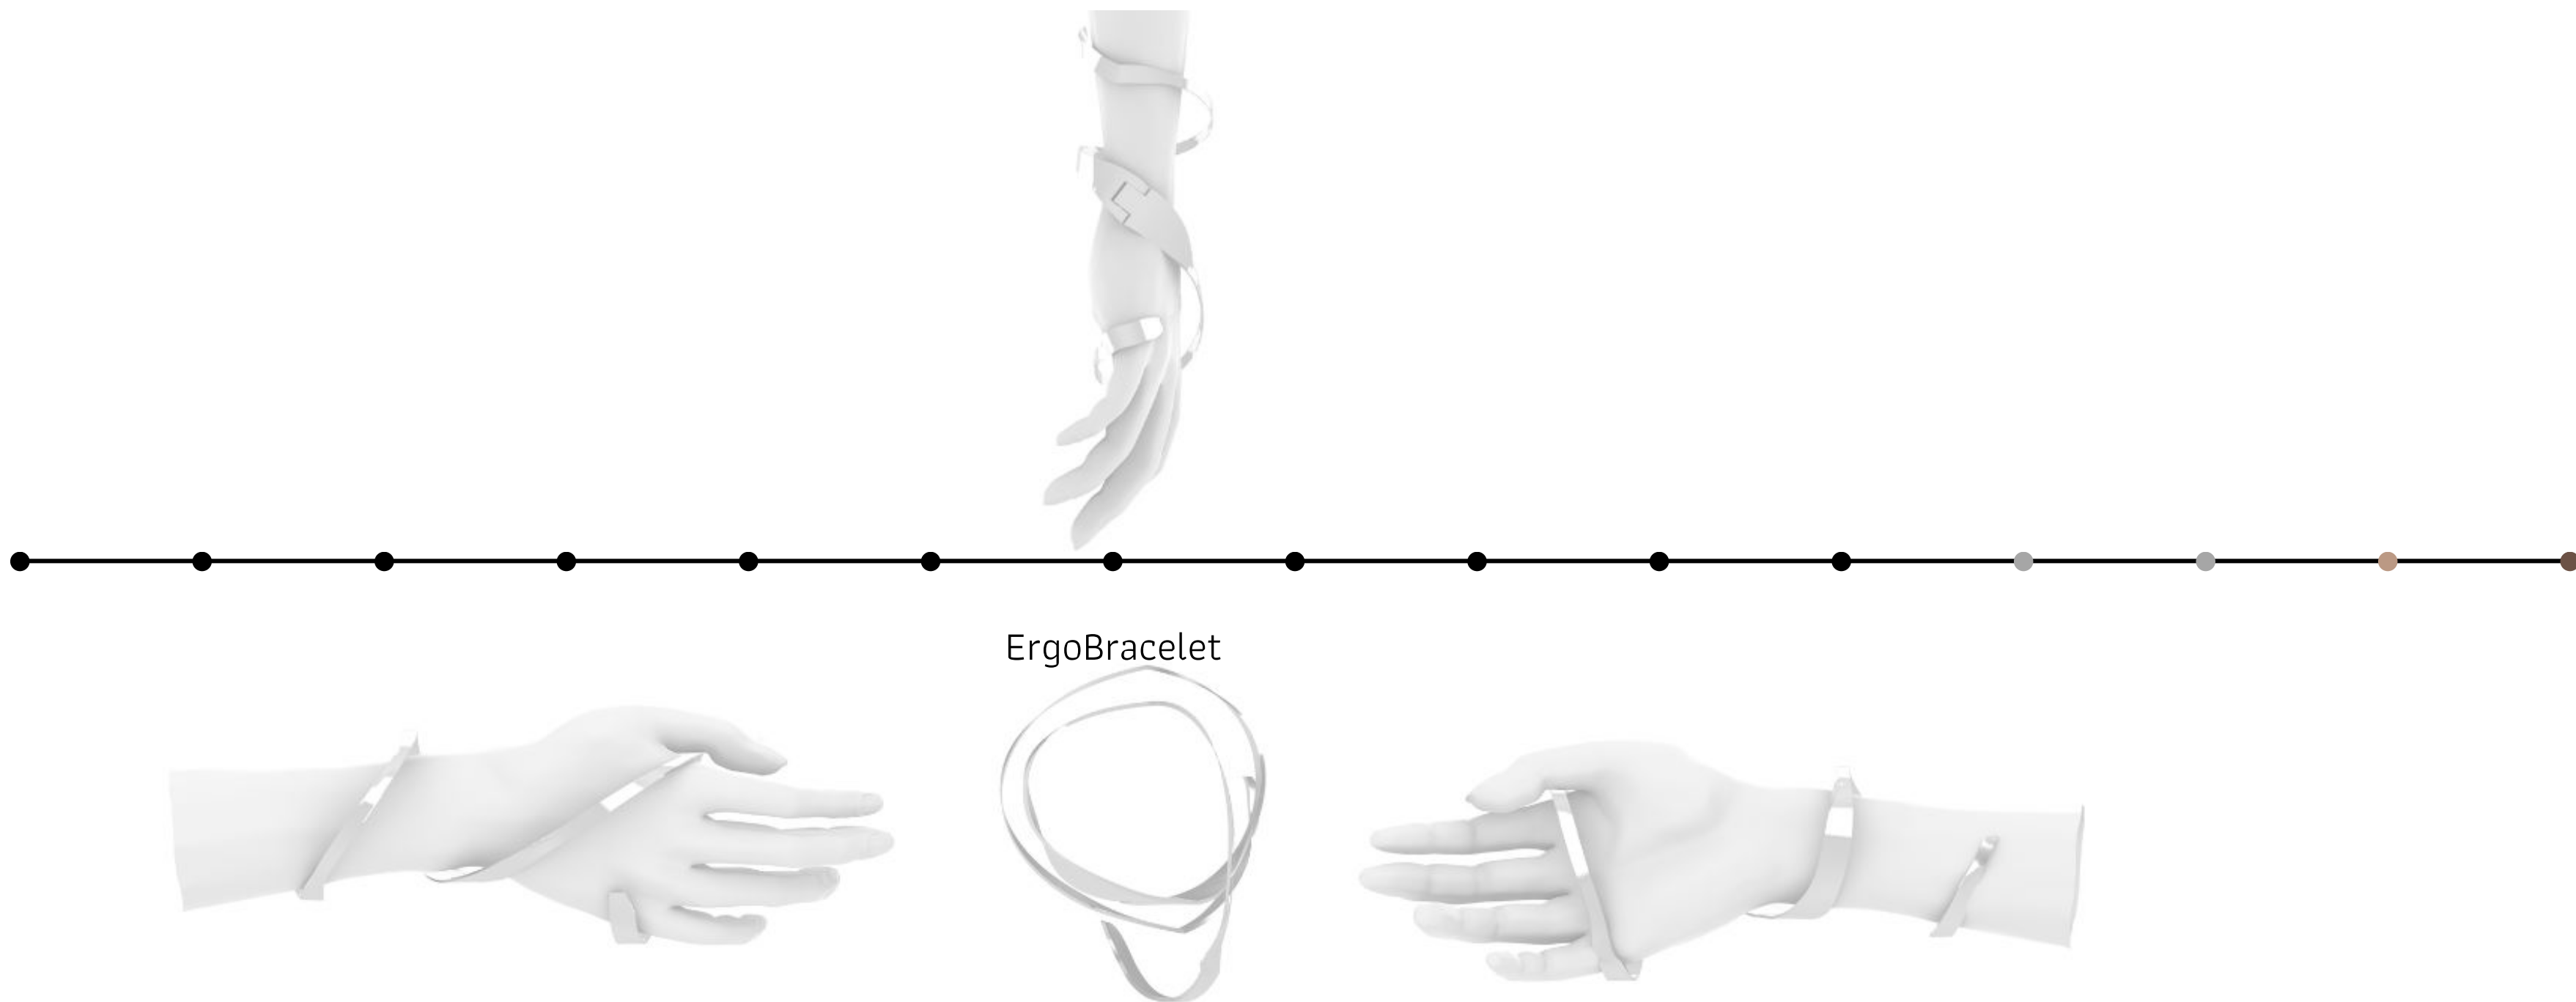

HOW TO USE

Designed for planting seagrass in the process of transplanting seagrass that has been cultivated in a certain period. Its protect seagrass from being washed away by severe waves.

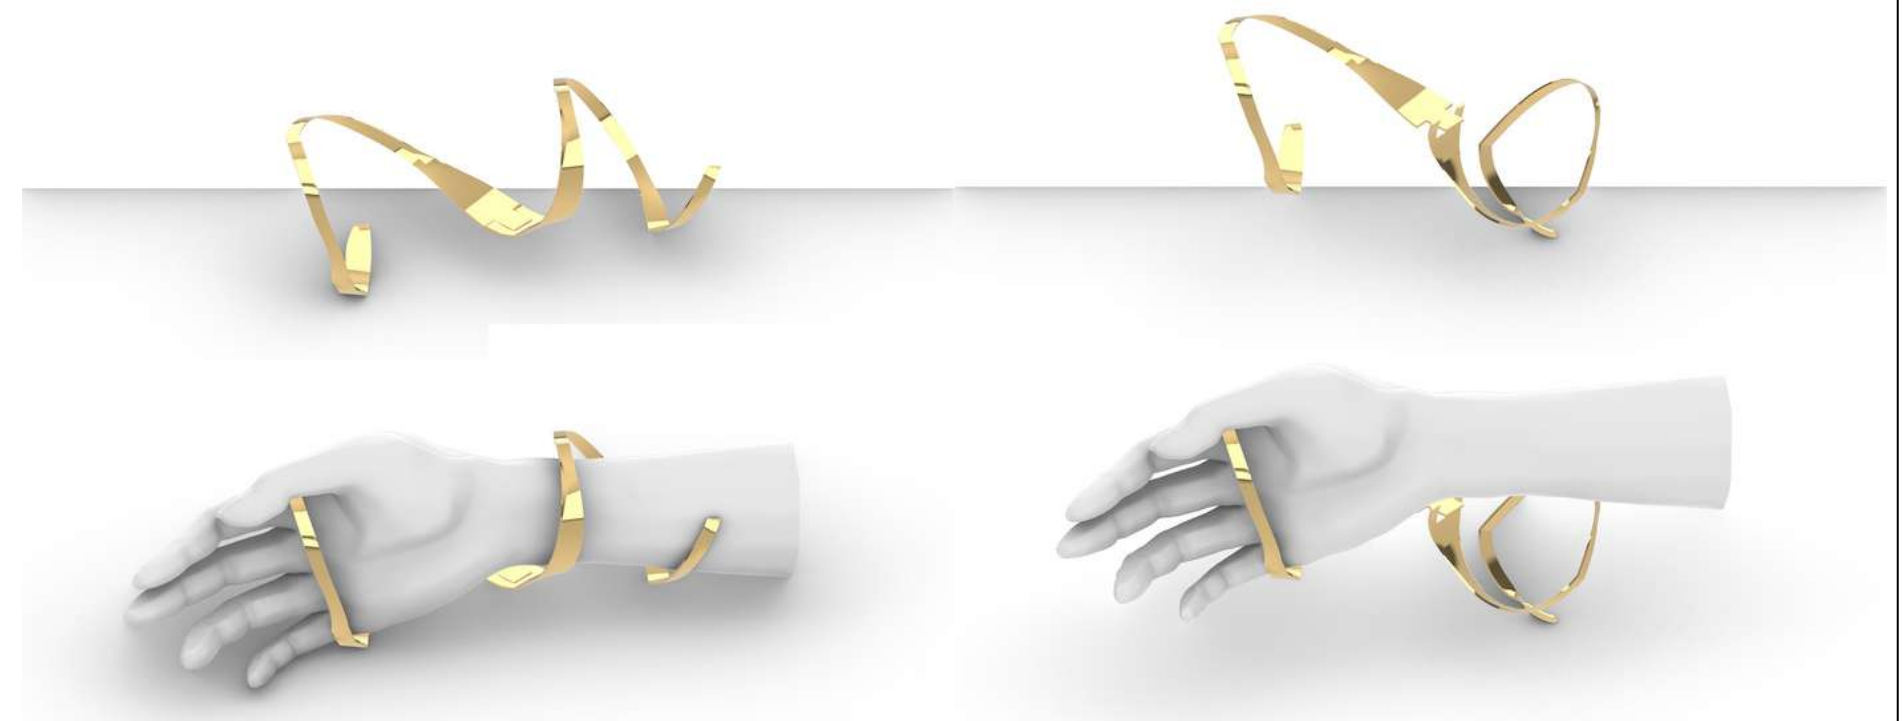

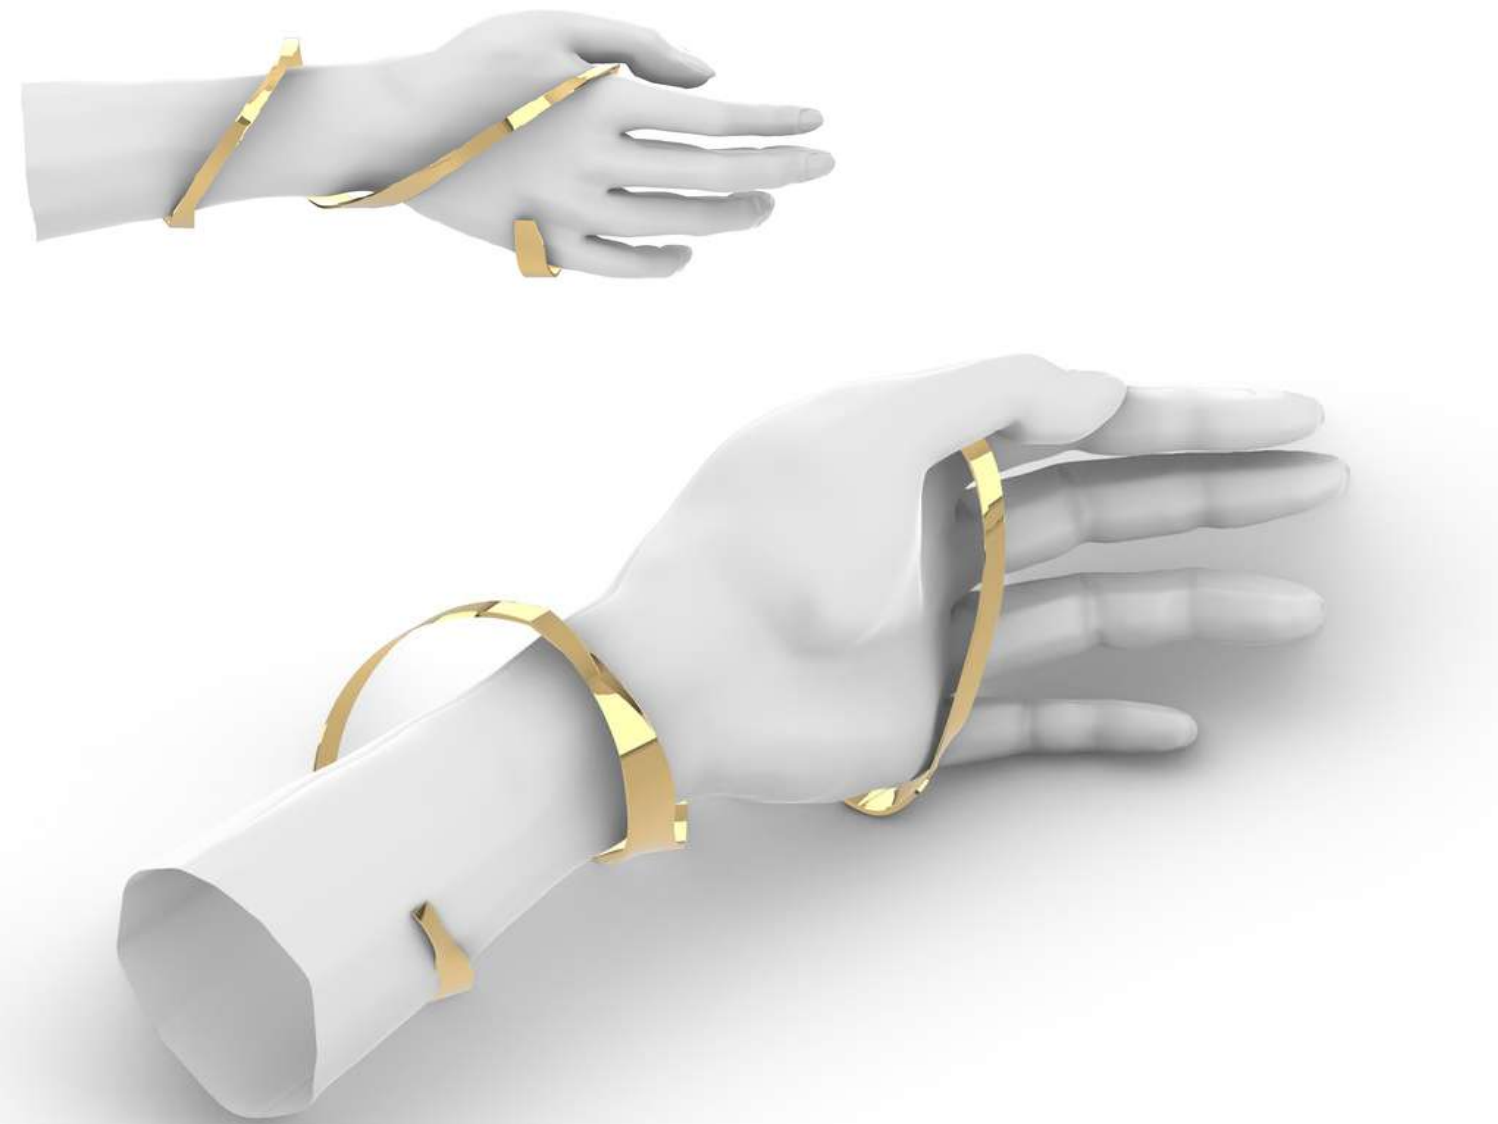

Force and pull out when the seagrass roots are strong and well-established.

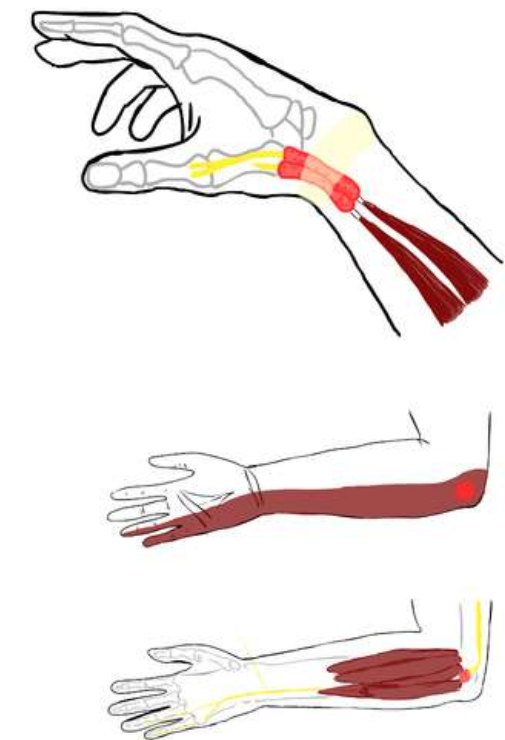

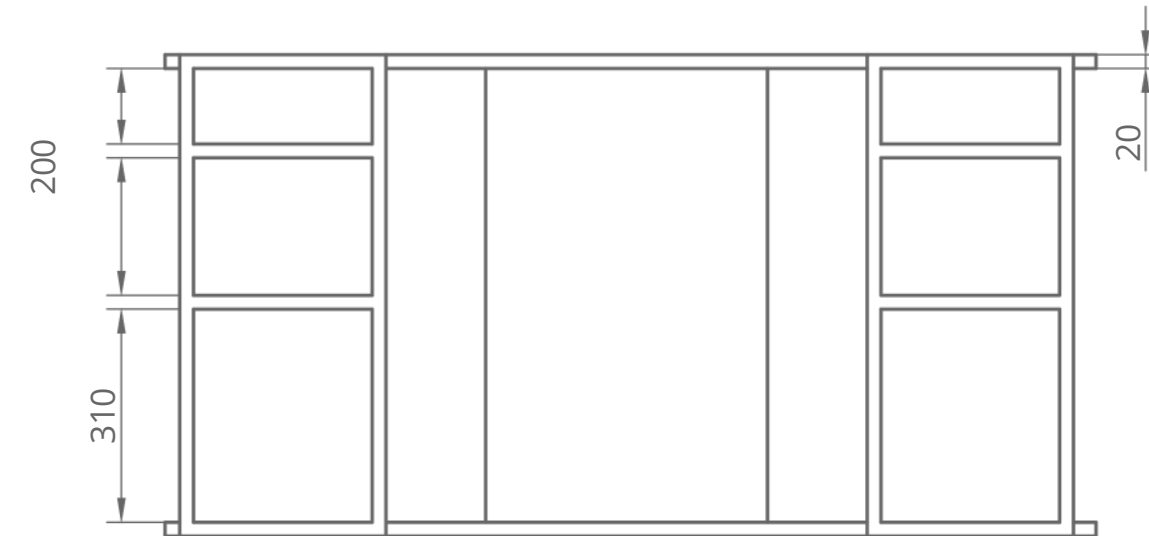

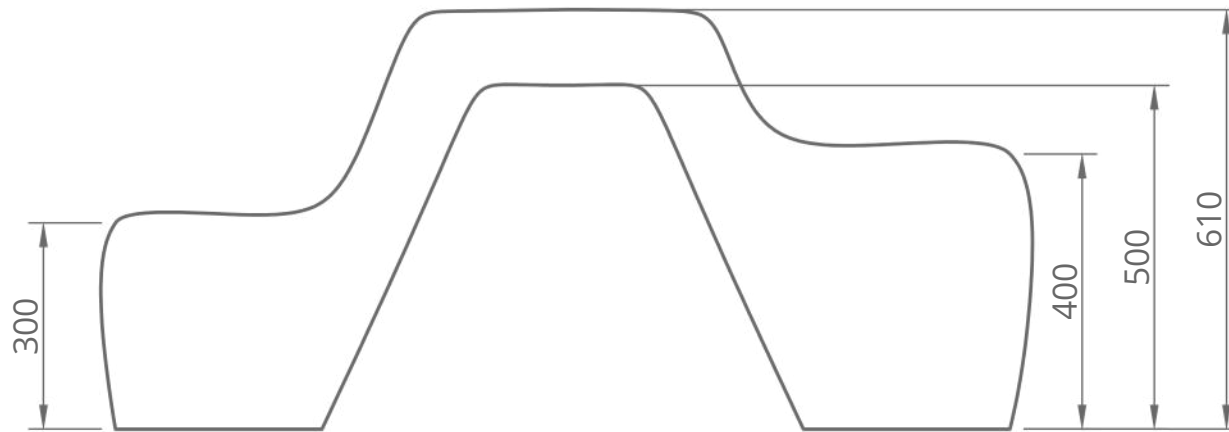

ErgoBracelet

WRIST RELIEF FOR READING

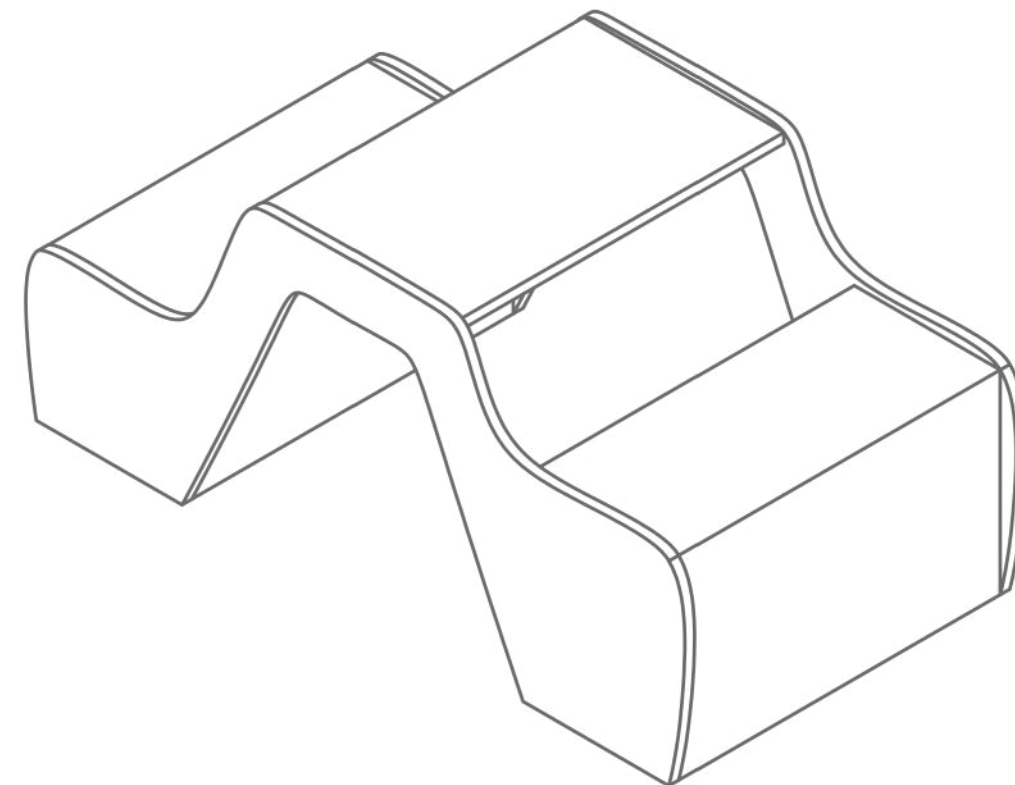

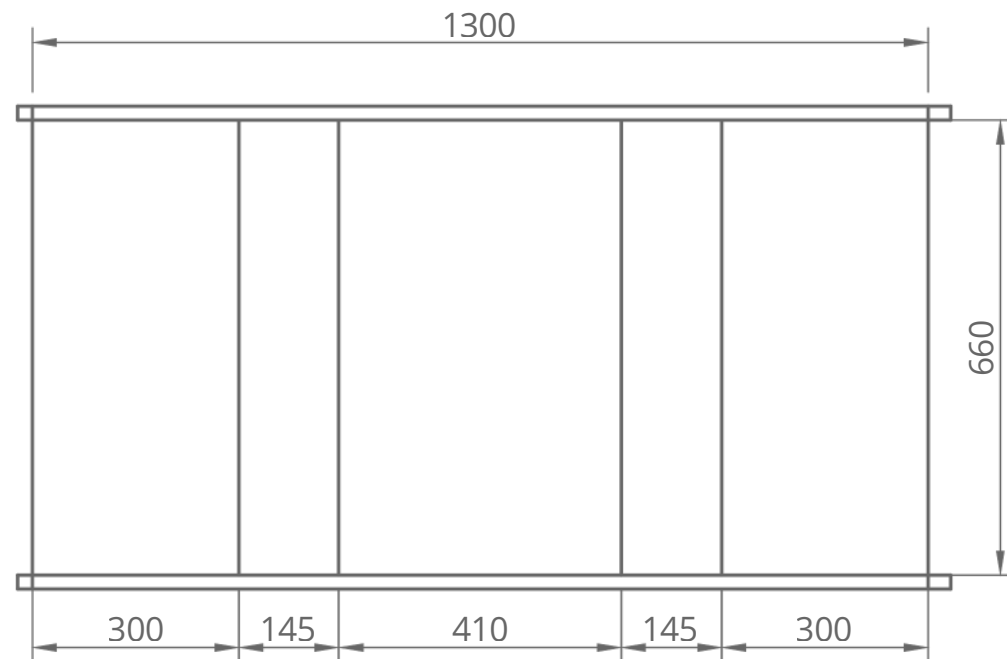

The ErgoBracelet is designed to alleviate wrist strain and reduce unnatural bending caused by holding books for extended periods. It redistributes the book's weight to minimize pressure on the wrist, preventing cumulative injuries and the risk of tendonitis. This innovative solution ensures comfort and promotes long-term wrist health for avid readers.

Memoir
Castle Desk

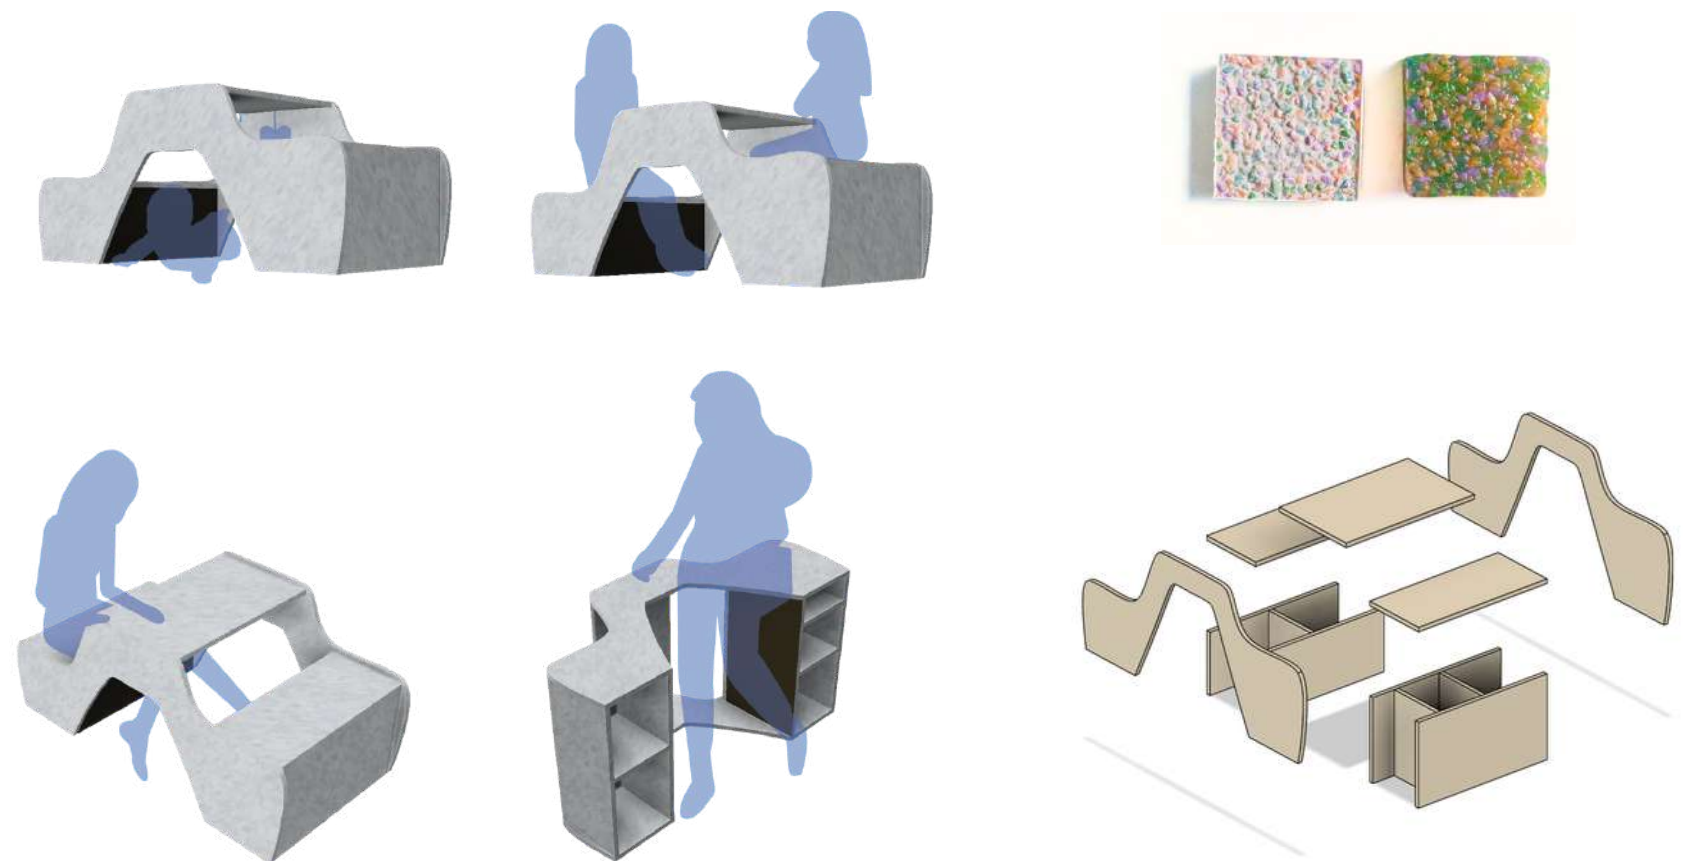

MEMOIR

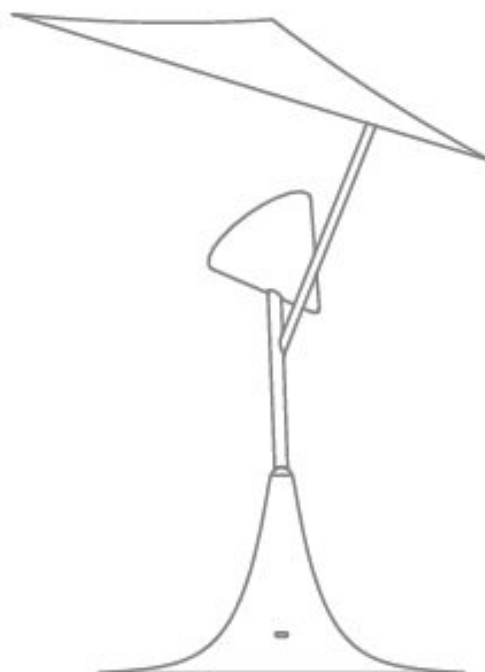

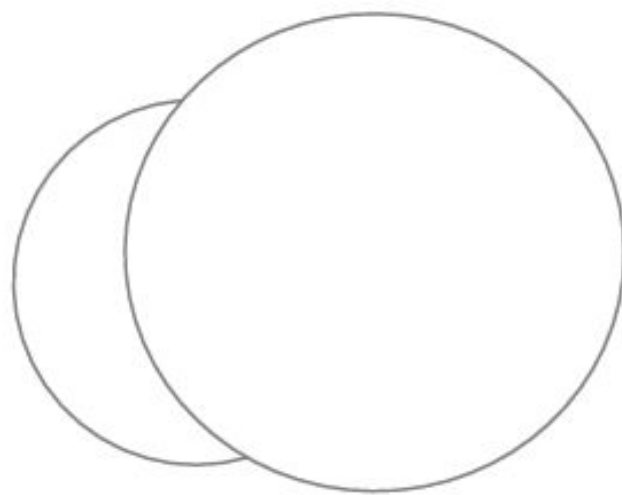

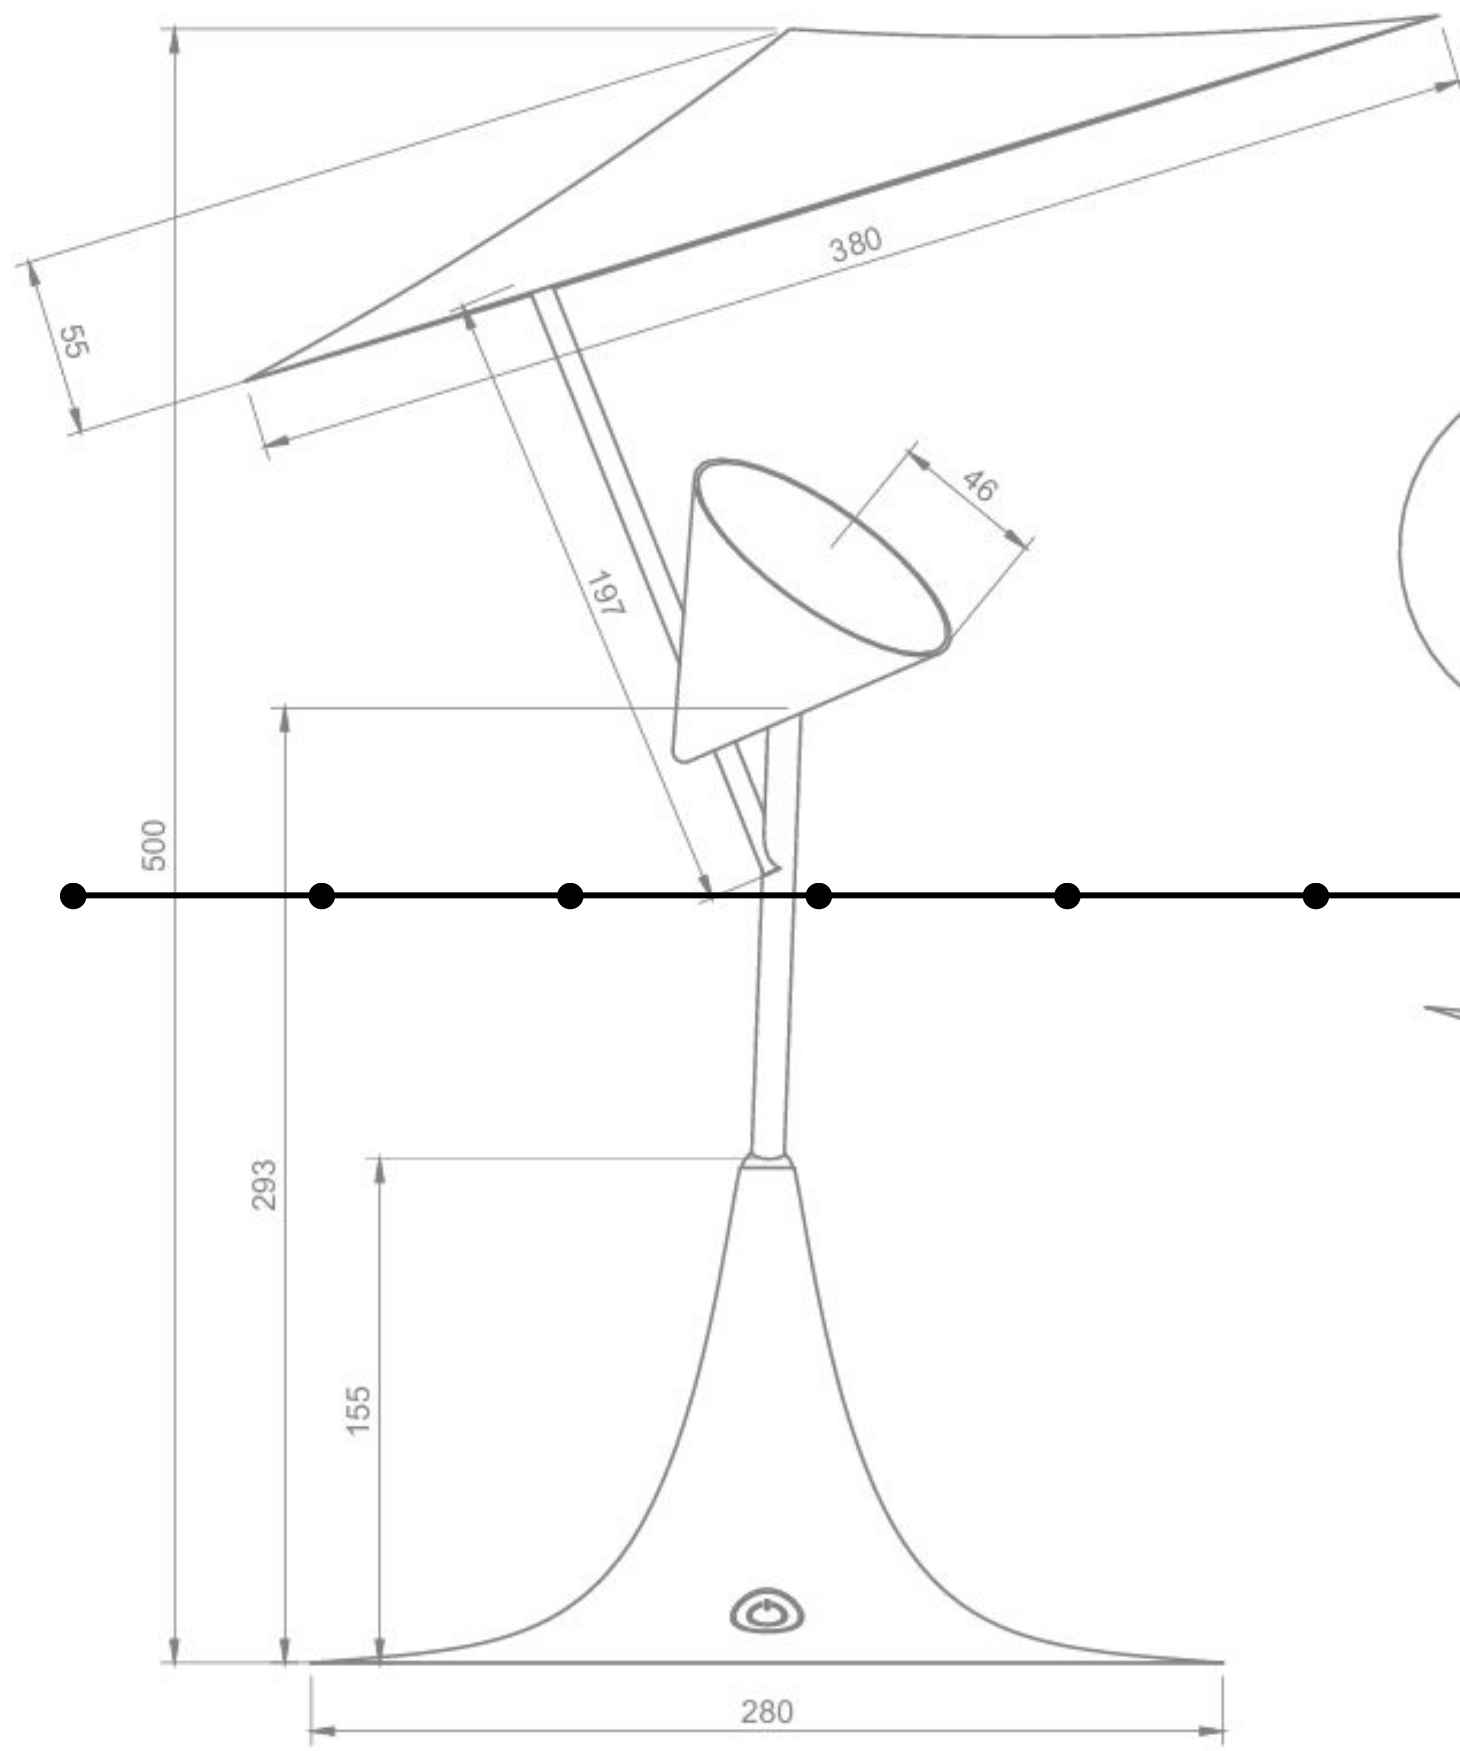

CASTLE DESK

FROM PLAY TO GENIUS

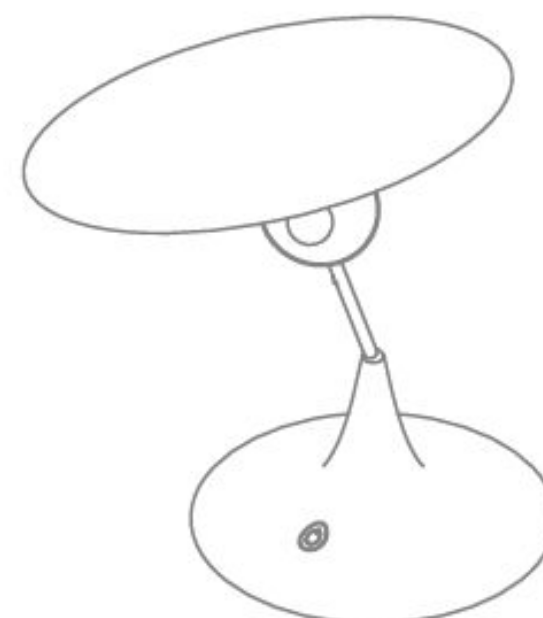

Children's furniture is often filled with memories but has a short lifespan due to how quickly children grow. This makes such furniture unnecessary and eventually worthless in the household. To address this, we designed furniture that can be used for a longer period, preserving memories from childhood to adulthood. Originally a playhouse, this piece of furniture can be adapted to suit a child's changing needs as they grow. For example, it can be transformed into a picnic table for playing, dining, doing homework, or reading. Additionally, it can serve as a table with built-in storage for household items or even as a standing spot to lean on while waiting for family members before heading out together.

Brella

Desk Lamp

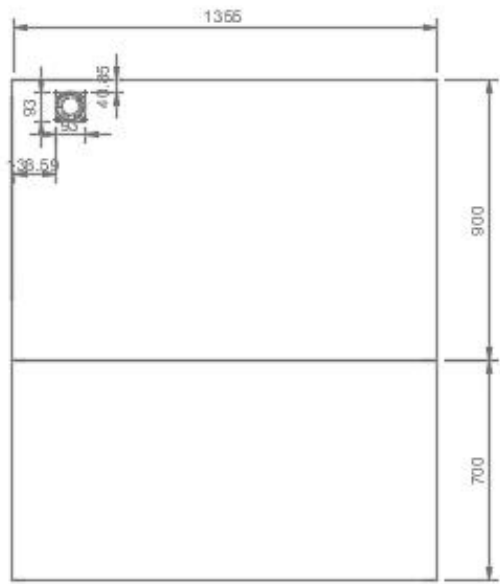

Brella

"Desk Lamp Brella" is a special design desk lamp inspired by a little childhood friend who is always by our side. The lamp is designed in the shape of a little doll wearing a hat and holding an umbrella to give a warm, cute and friendly feeling like a close friend in the house.

Drugs Locker

Phyathai 3 Hospital

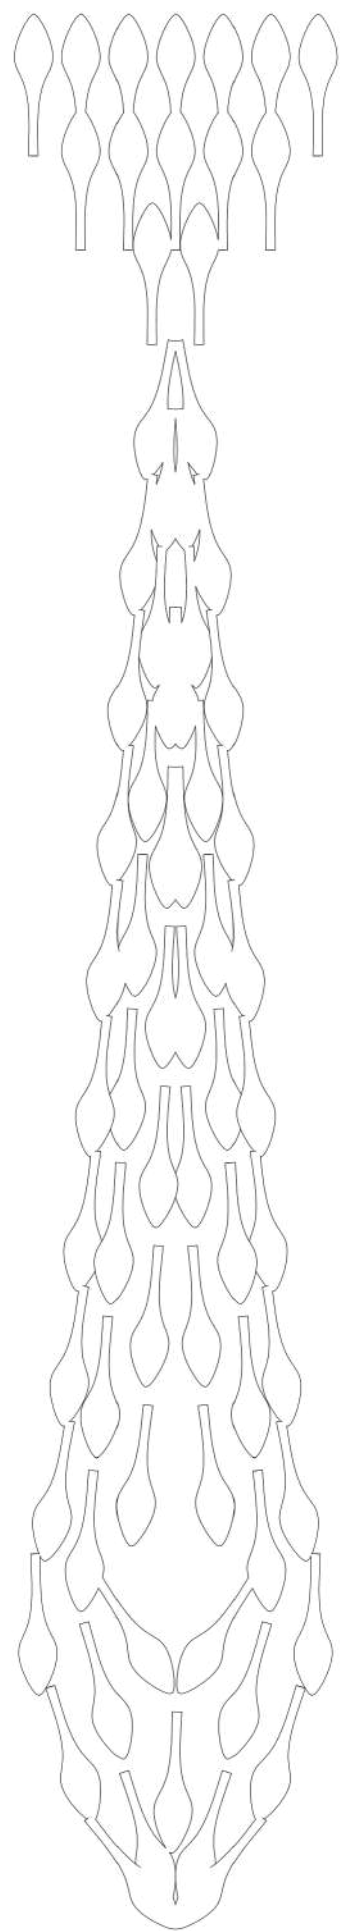

The new medication cabinet addresses previous design issues with optimized compartment sizes [minimum 8.26 cm], ensuring easy access without hand injuries. Equipped with a QR code scanning system to unlock specific compartments, it reduces errors in medication handling. The improved structure minimizes the need for bending, features status indicator lights, and uses durable materials resistant to moisture, rust, and fire, while maintaining stable temperature control. This design enhances efficiency and safety for users.

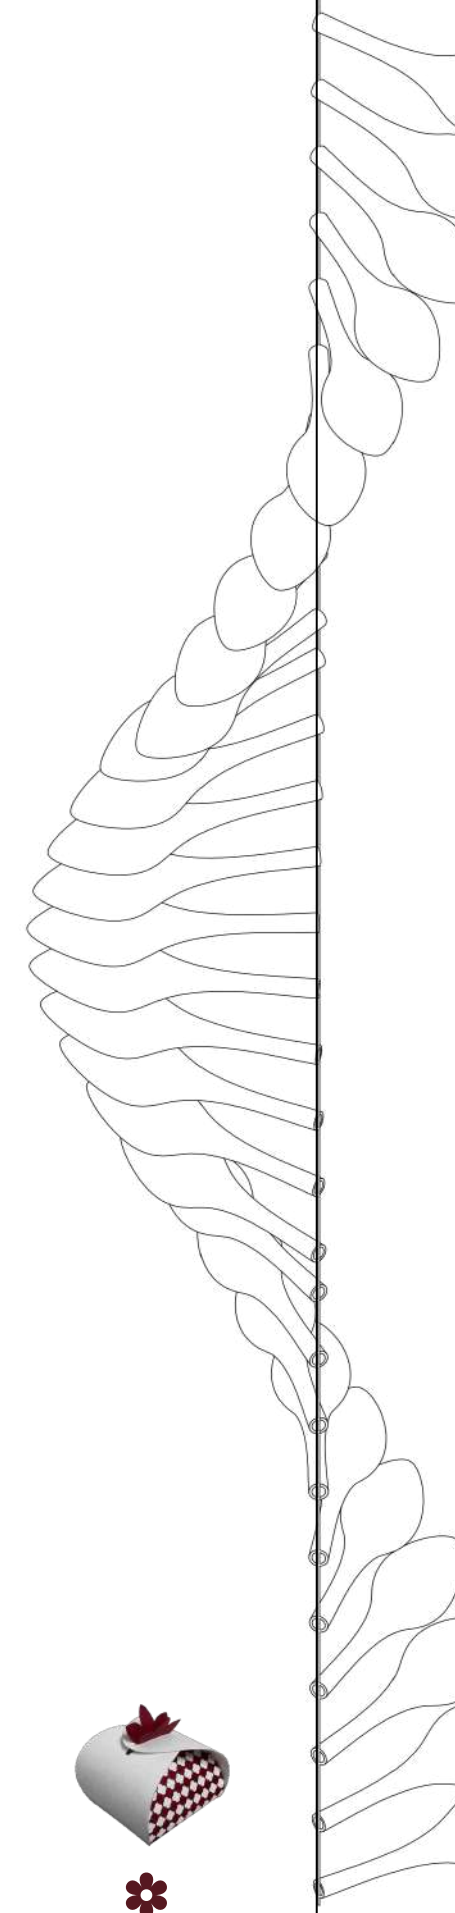

Thesis

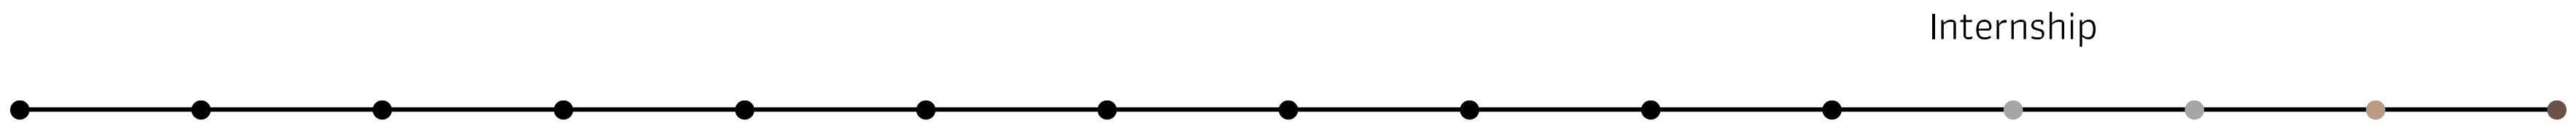

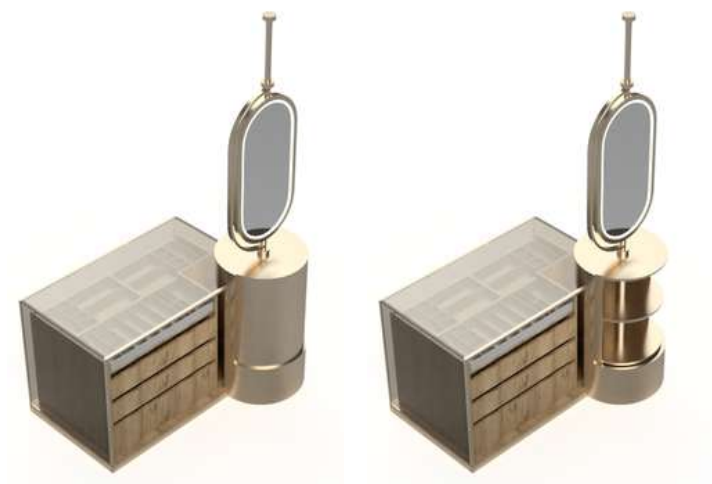

ROI- ROPE [ร็อยรู่]

New-Form Garland Design

A design project focused on jewelry and lifestyle items that reinterpret traditional Thai garland craftsmanship. The process applies a deconstruction approach, where elements are separated and reassembled into contemporary forms. The project emphasizes transforming fresh flowers—traditionally seen as temporary—into durable, long-lasting products through sand-drying techniques and resin sealing. It aims to preserve meaningful moments from special occasions, turning them into functional objects that serve as tangible memory keepers.

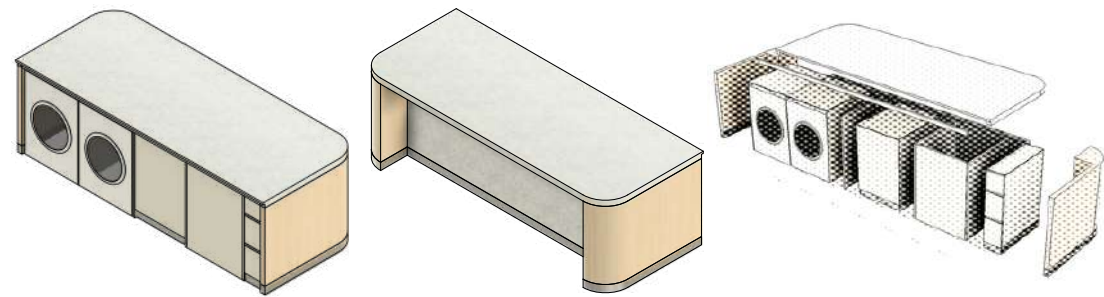

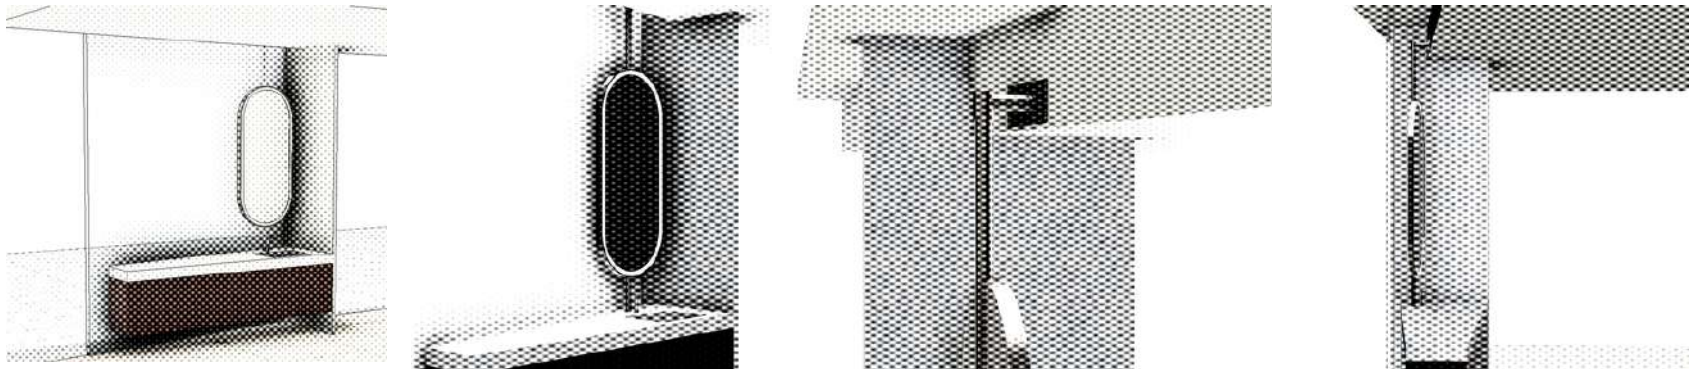

Create a 3D model and render an island walk-in closet.

Create a 3D model of the counter.

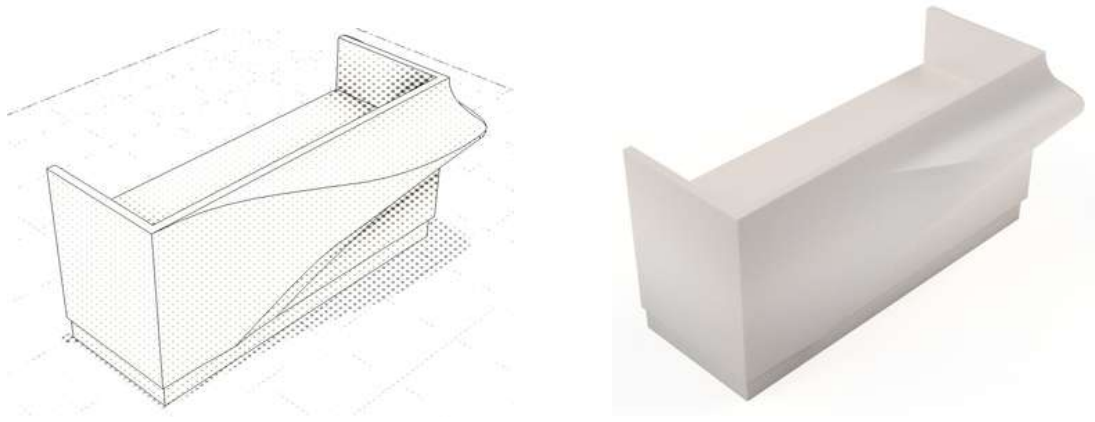

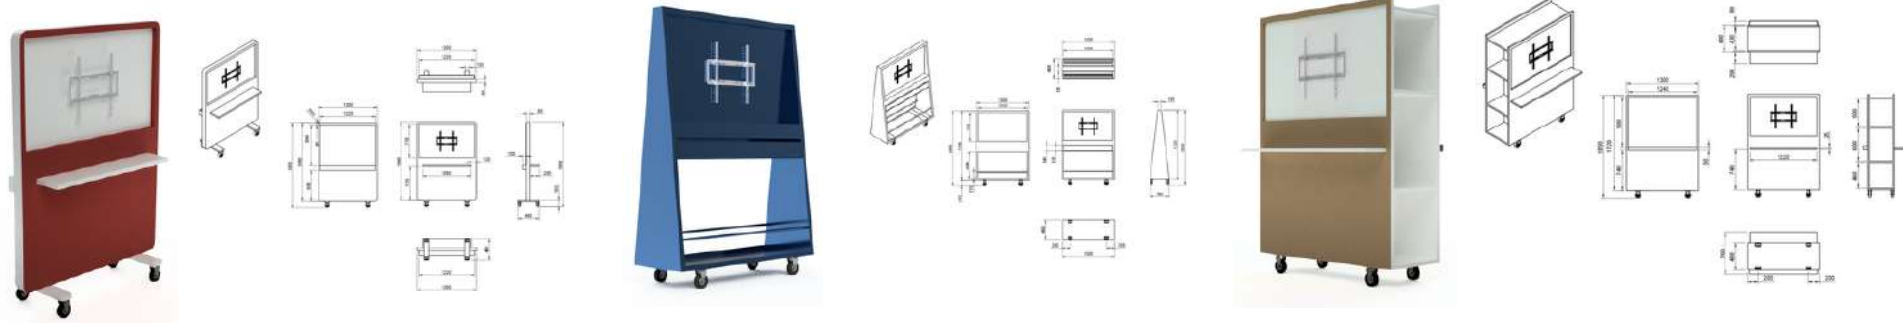

Rendering the sink area of a bathroom in a condo project.

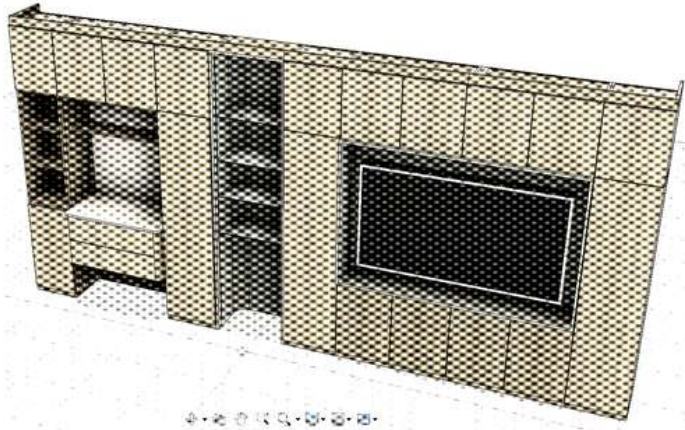

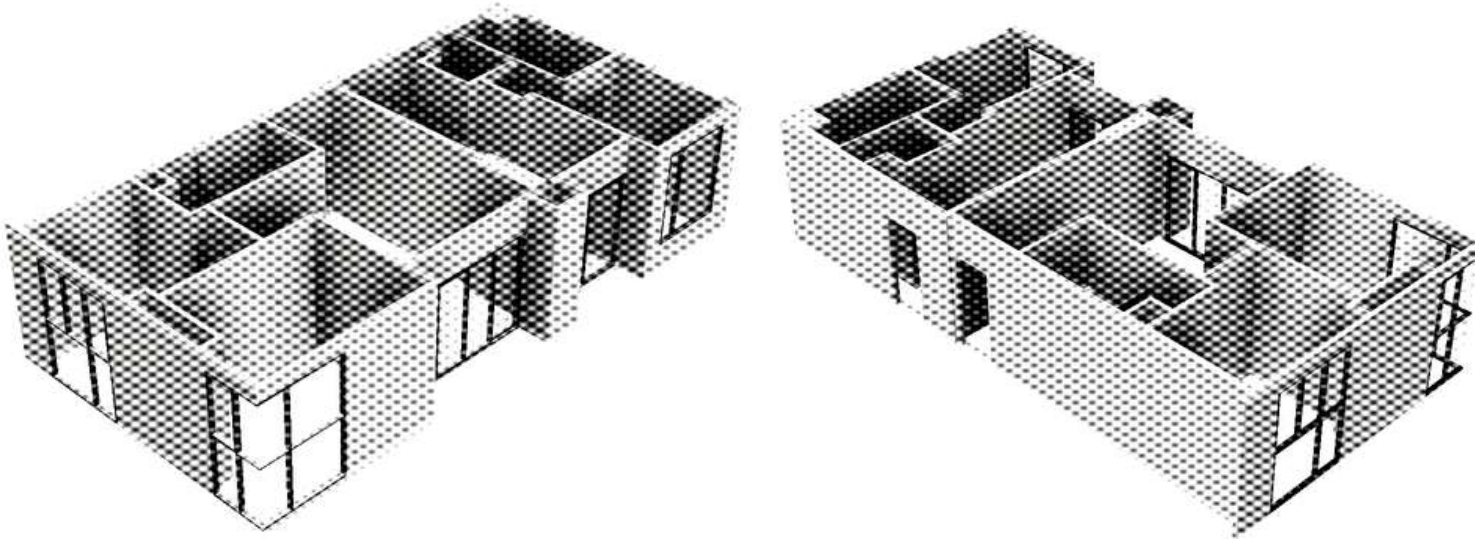

Create a 3D model and render a Dressing Table [work desk + vanity table].

Design a Mobile TV Office, create 3D renders and dimension drawings.

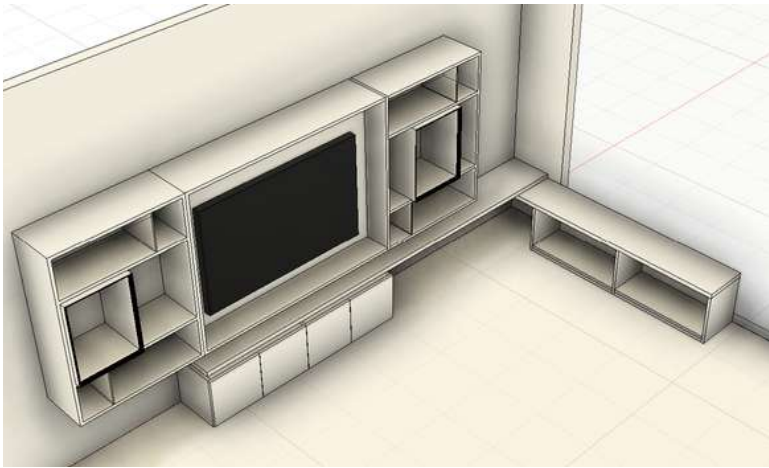

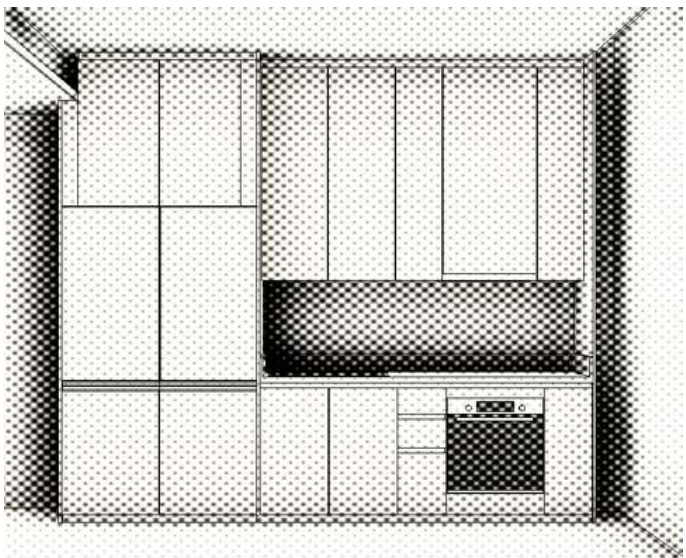

Create a 3D model of the reception counter.

Create a 3D model of a condo room based on the floor plan.

Create a TV set model and render it.

Kitchen set rendering

Create a 3D render of a sideboard/TV set.
